

Pine Island Glacier (PIG) profile 1km upstream of the grounding line:

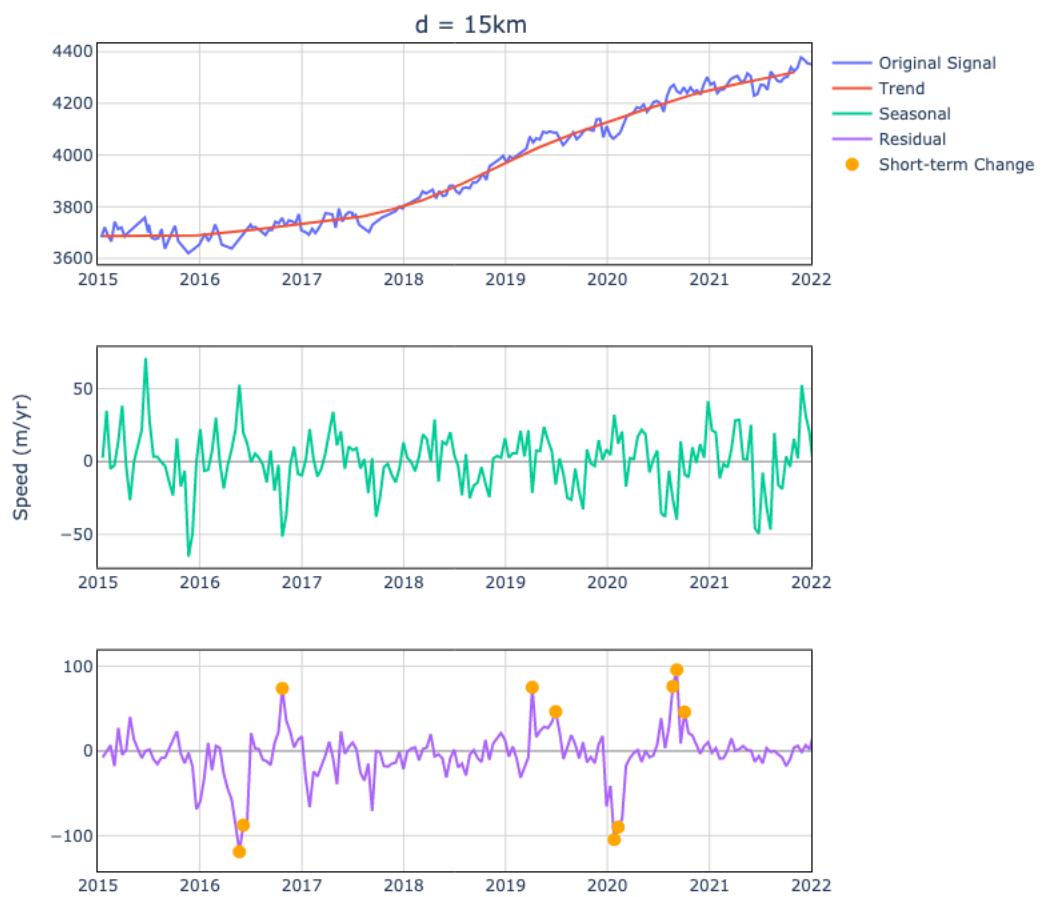

Point a is the start point ($d = 0\text{km}$) and b is the end point ($d = 55\text{km}$). Extraction points are spaced 5km apart.

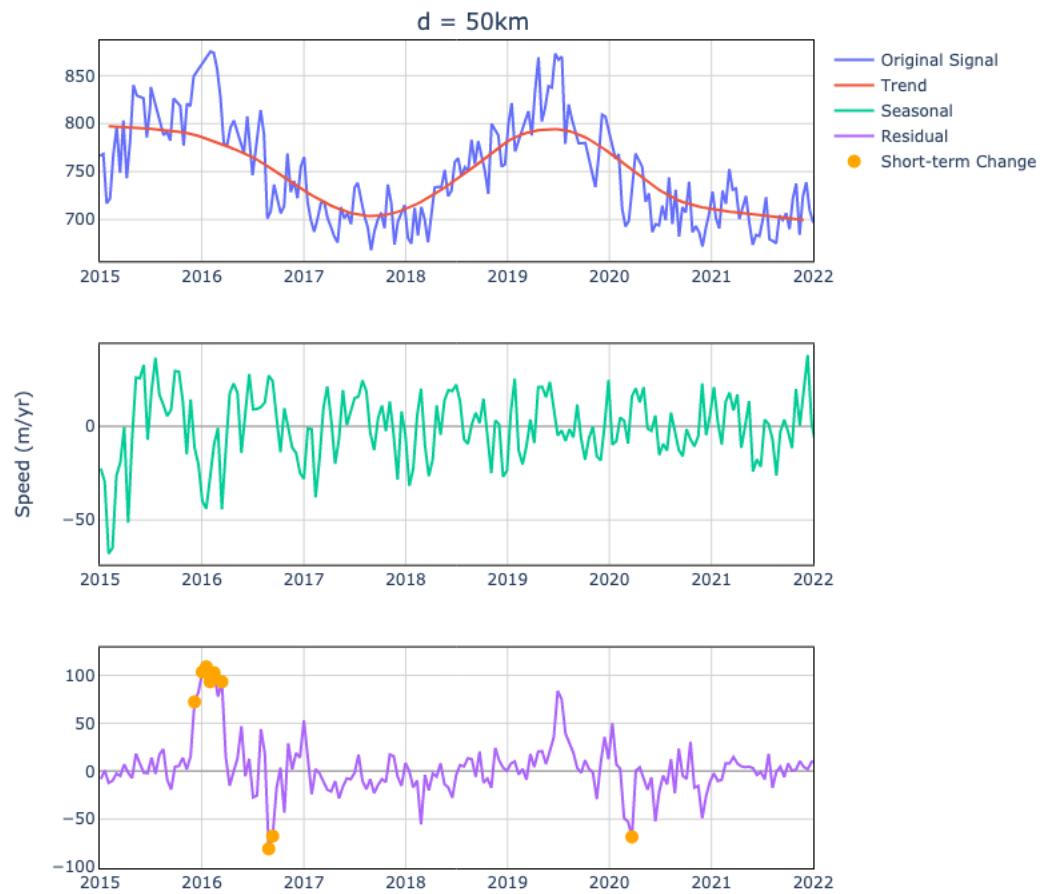

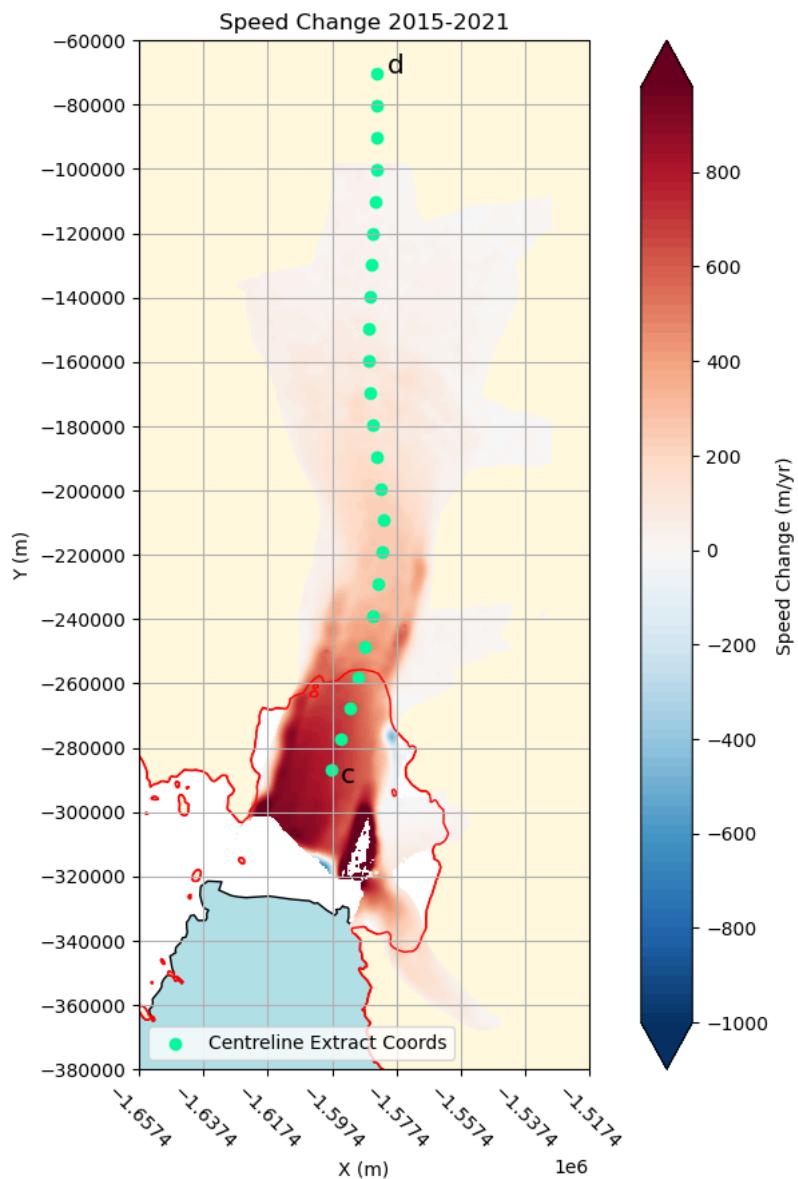

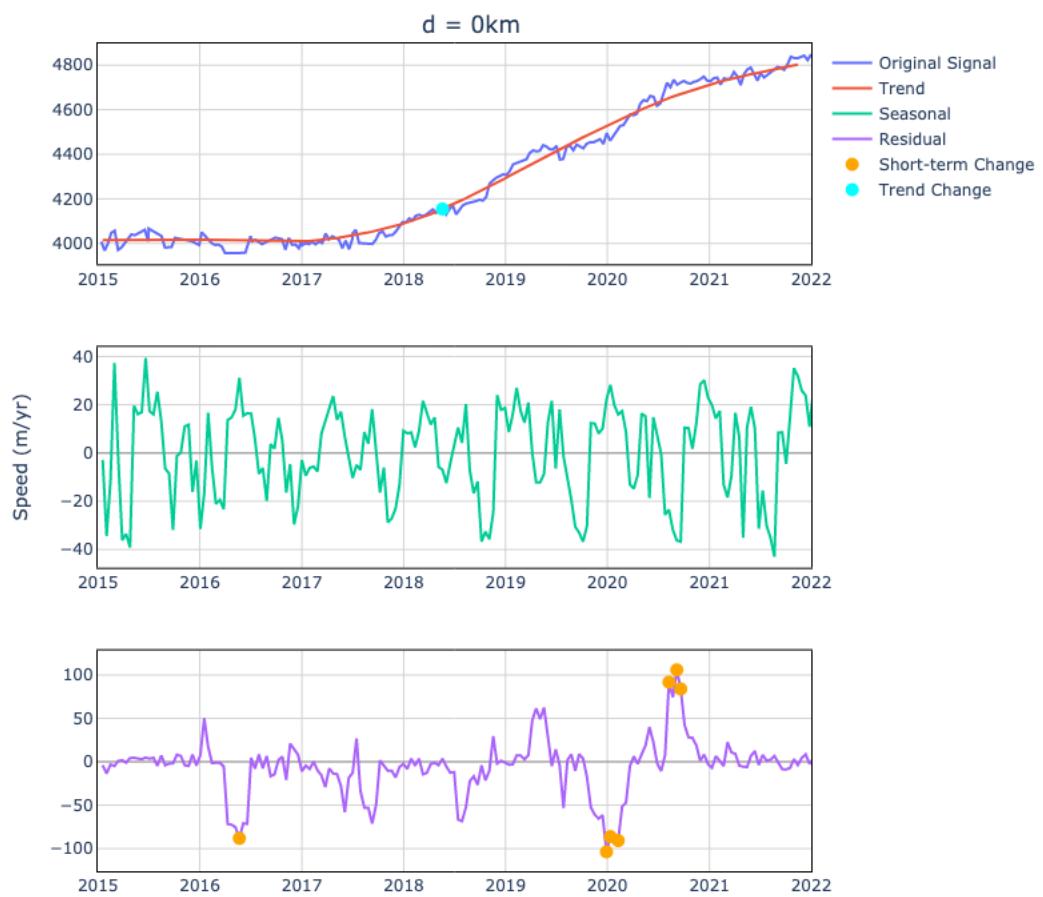

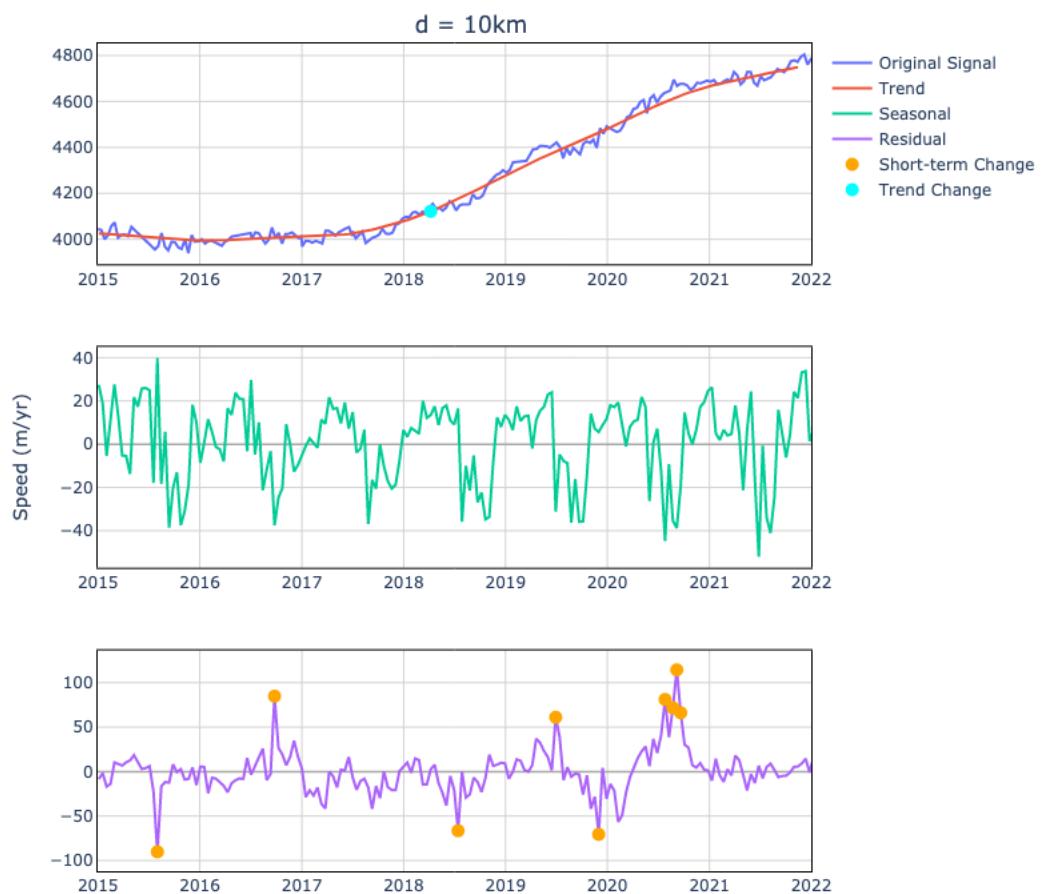

Pine Island Glacier (PIG) profile along the centreline of the glacier:

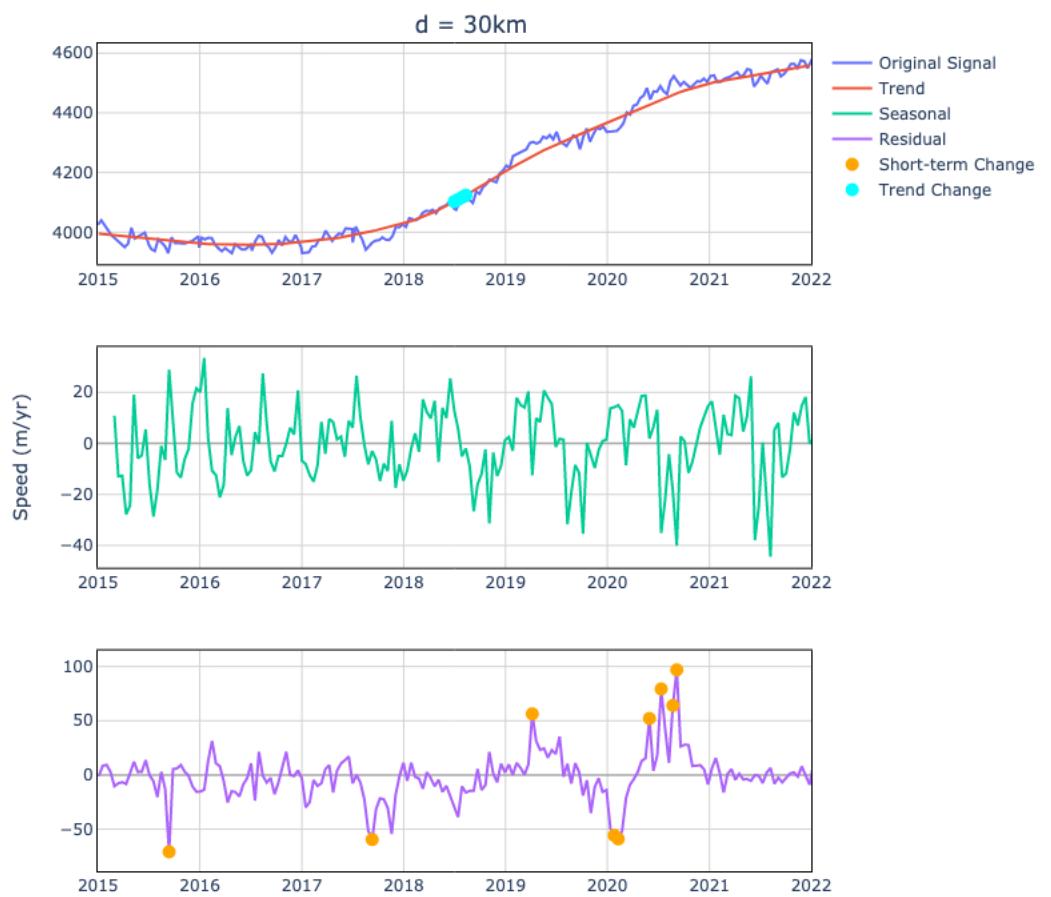

Point c is the start point ($d = 0\text{km}$) and d is the end point ($d = 210\text{km}$). Extraction points are spaced 5km apart.

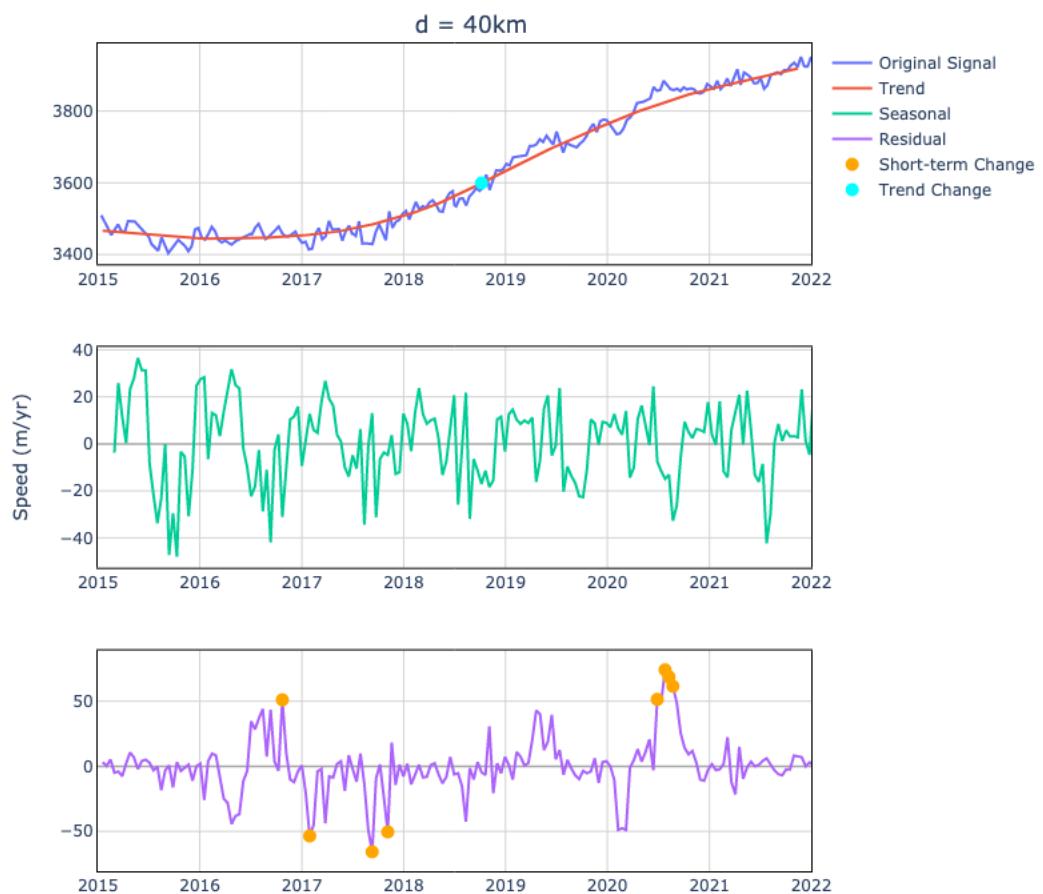

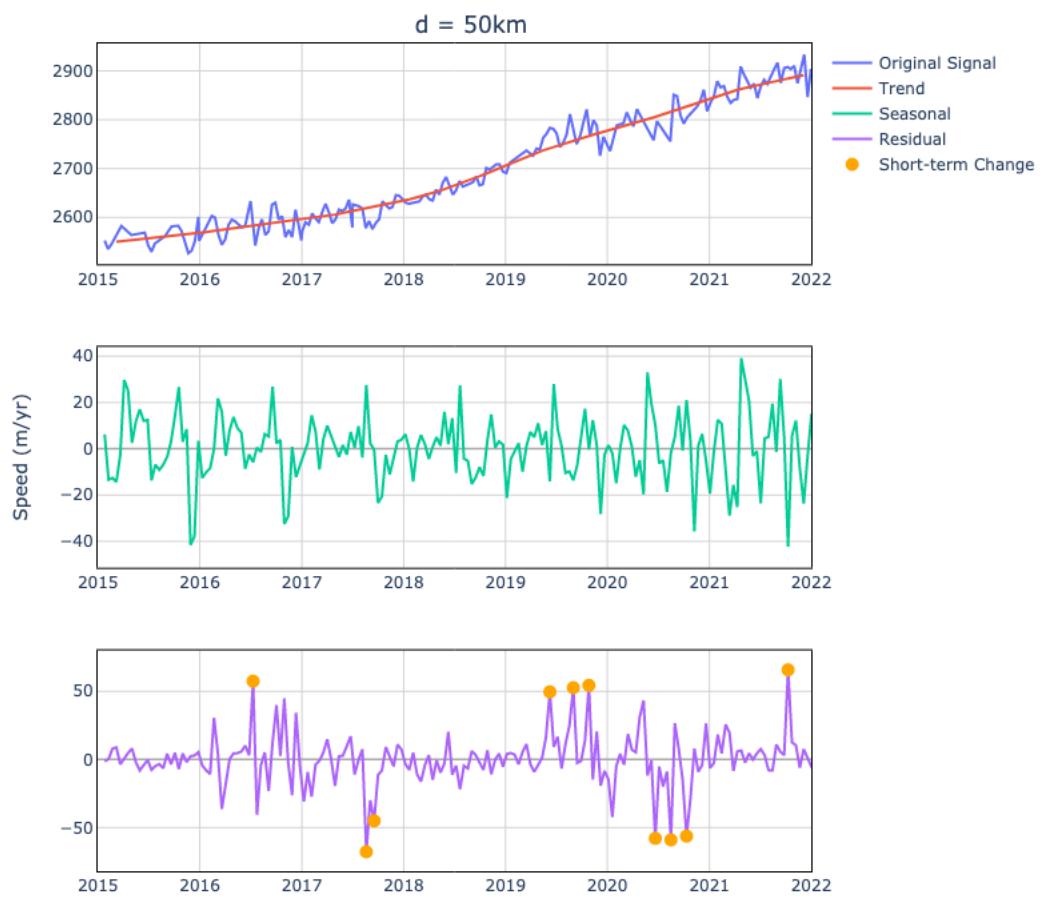

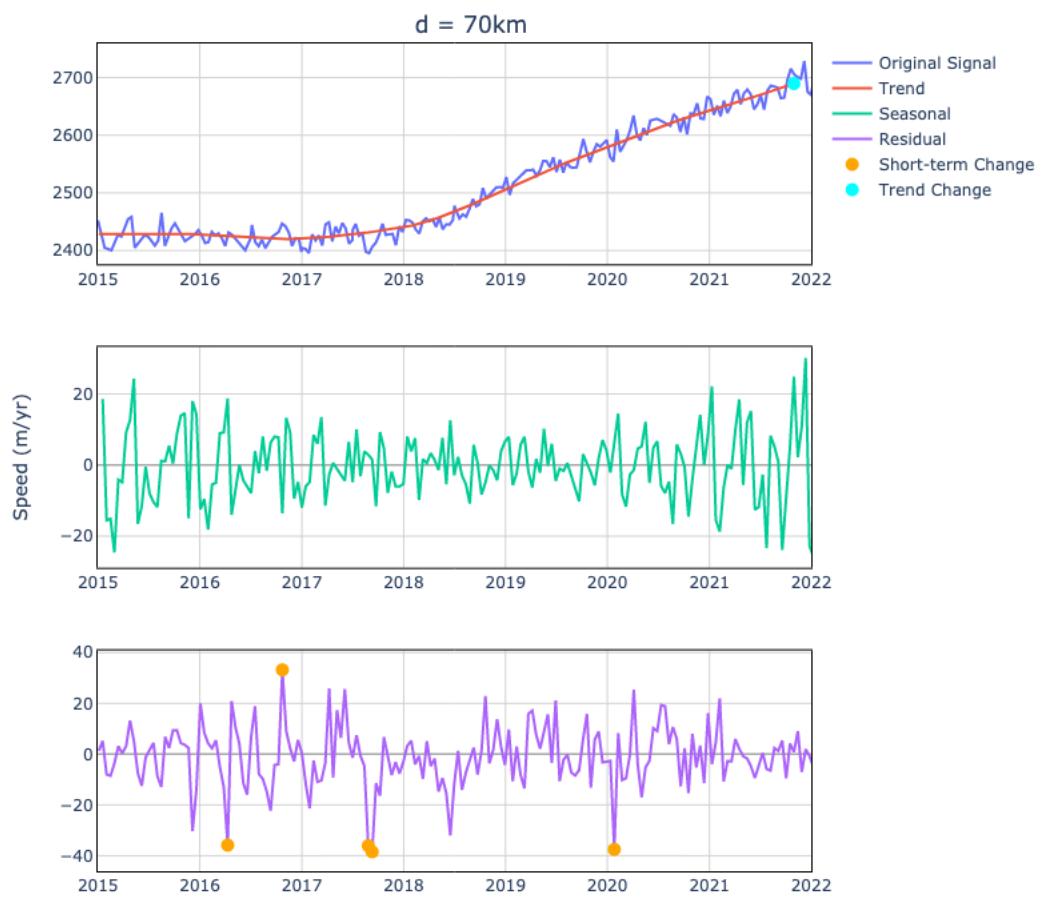

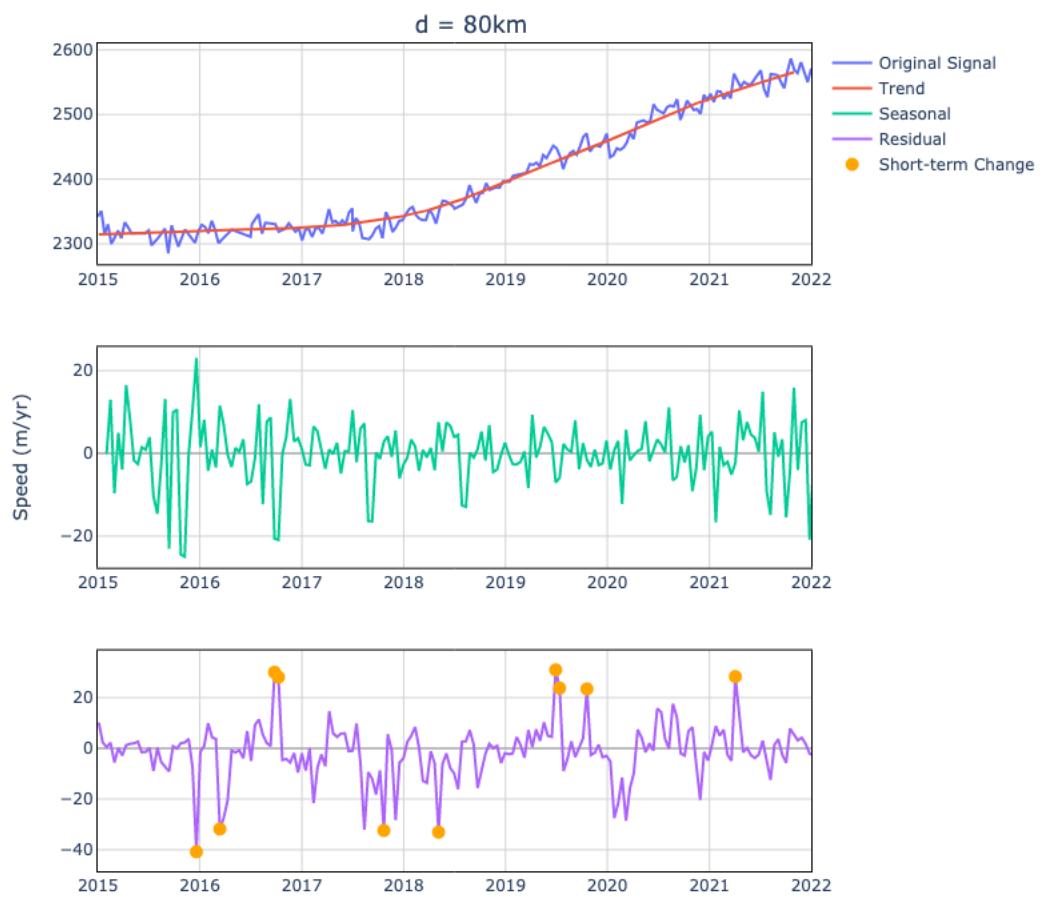

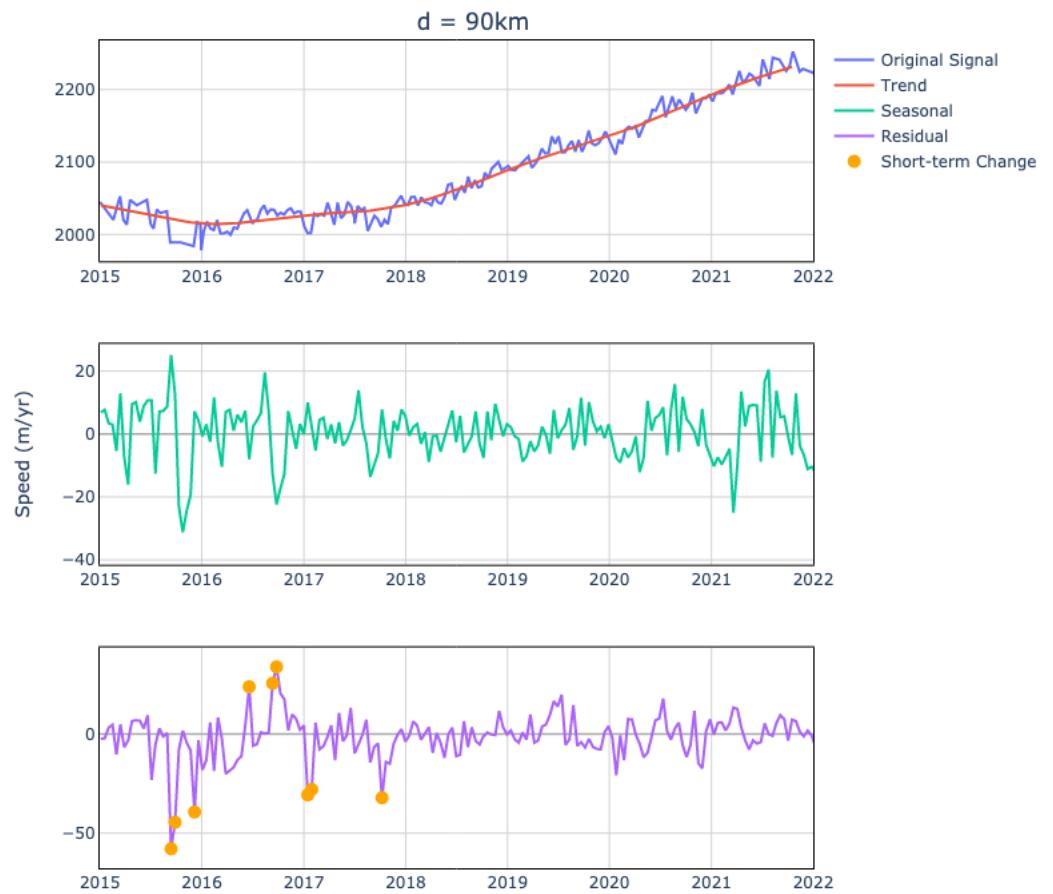

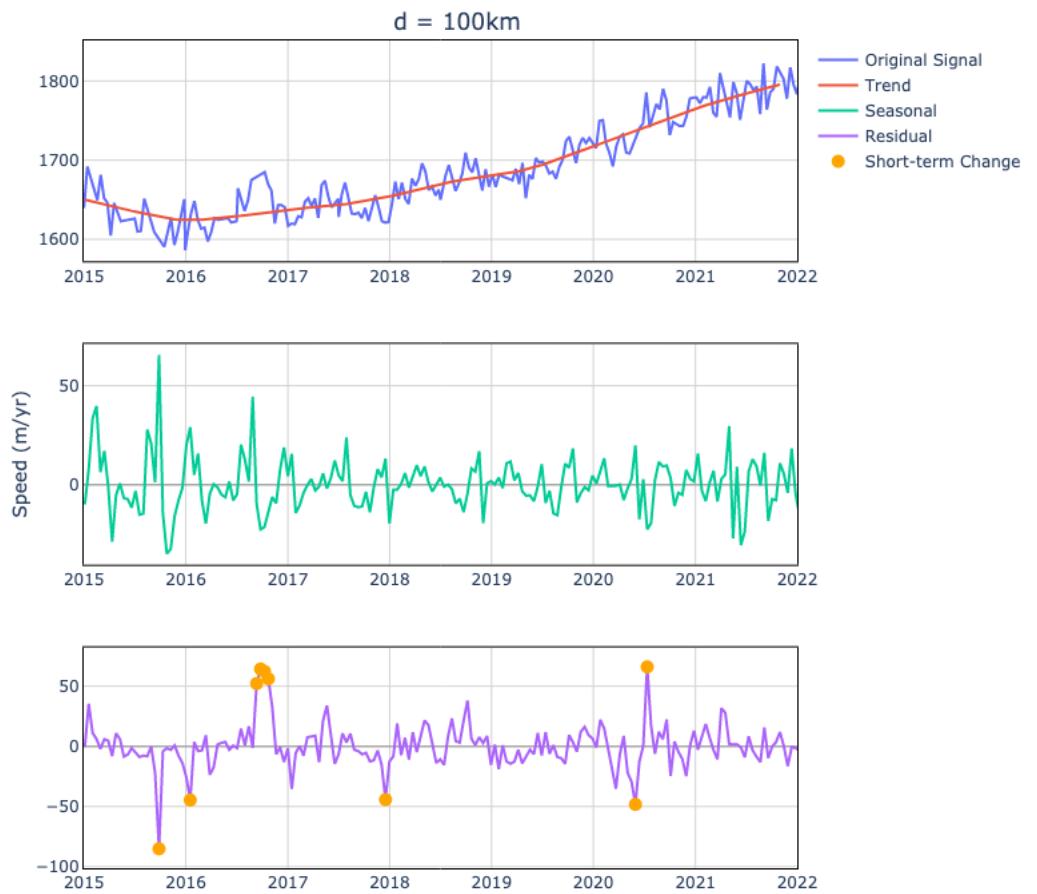

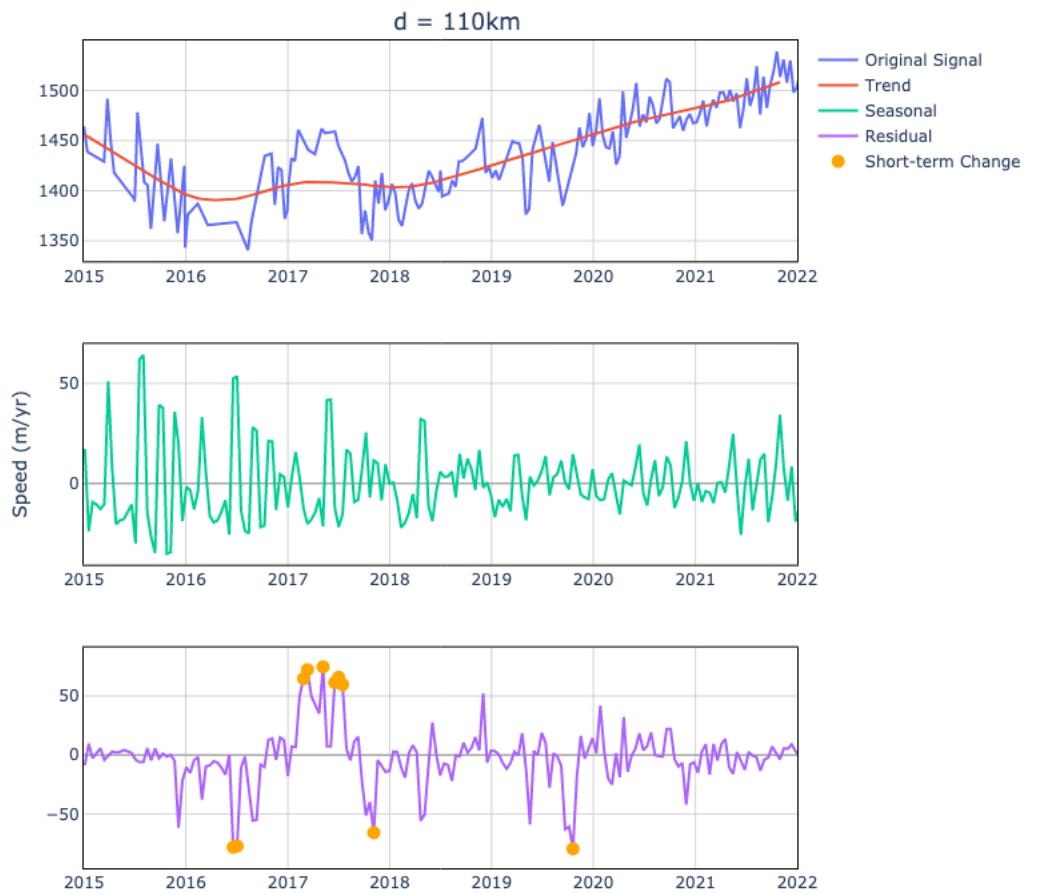

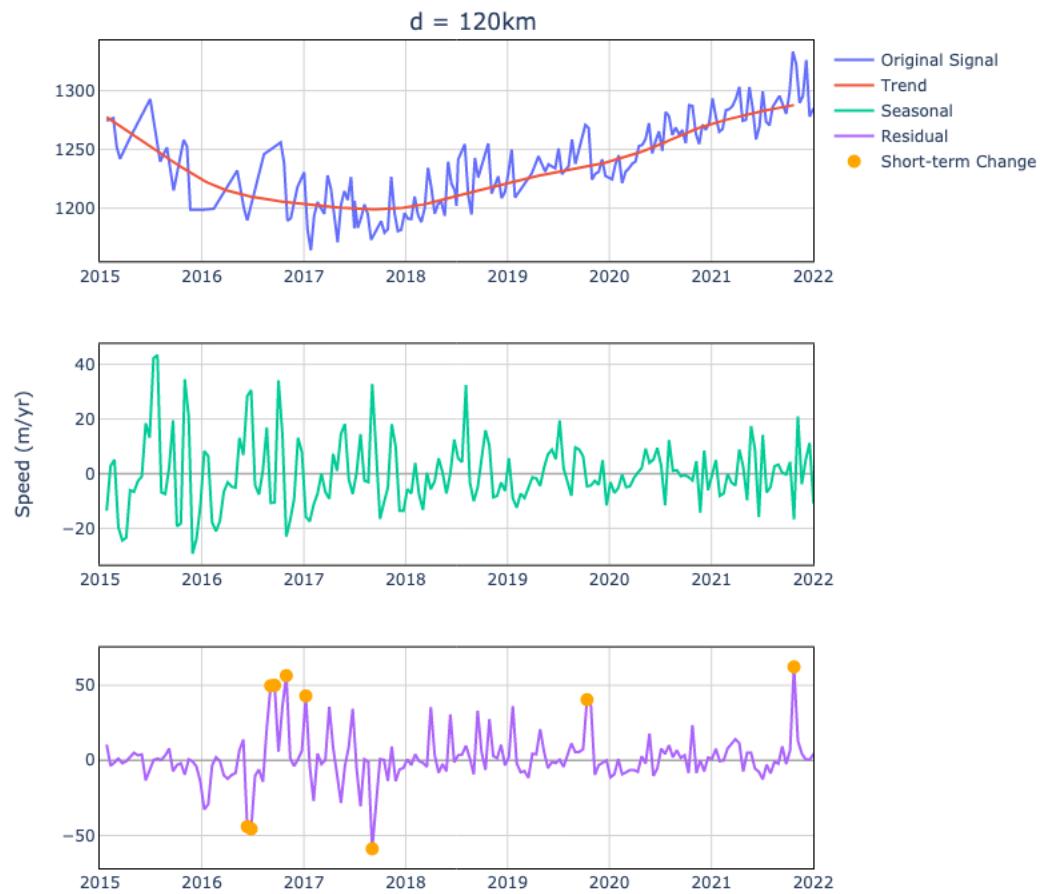

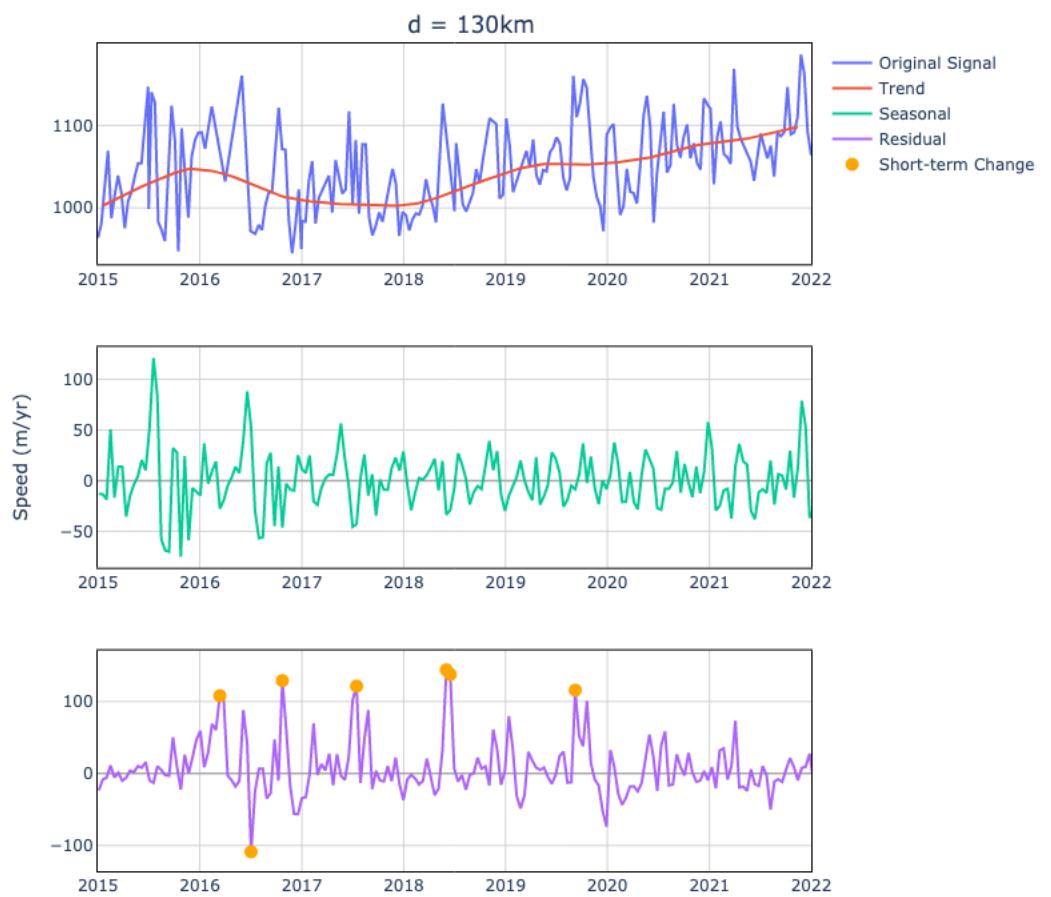

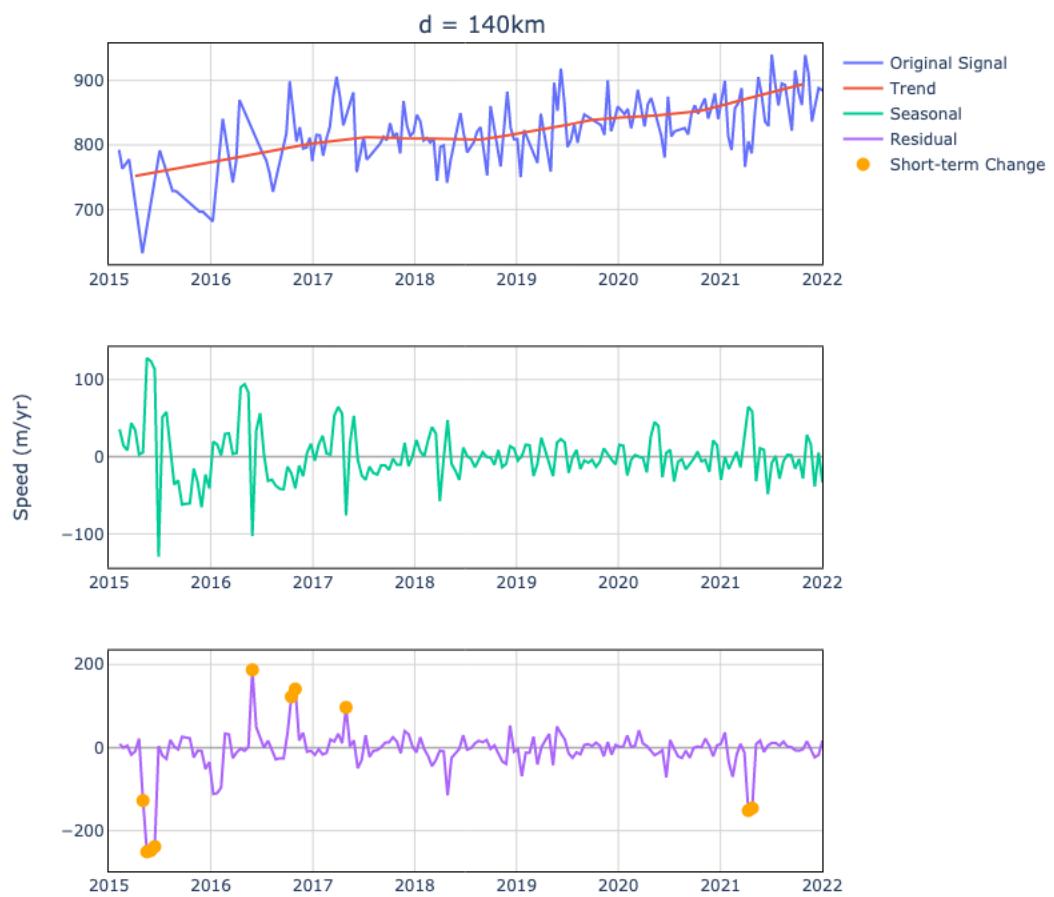

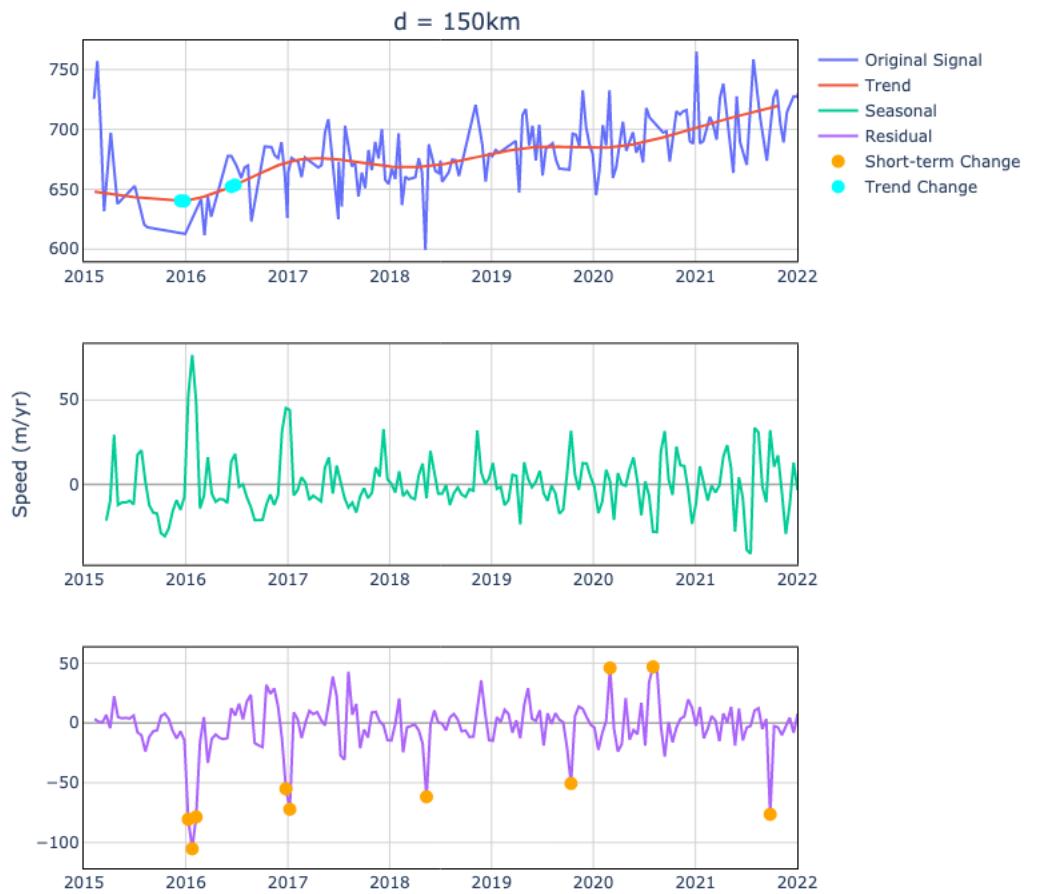

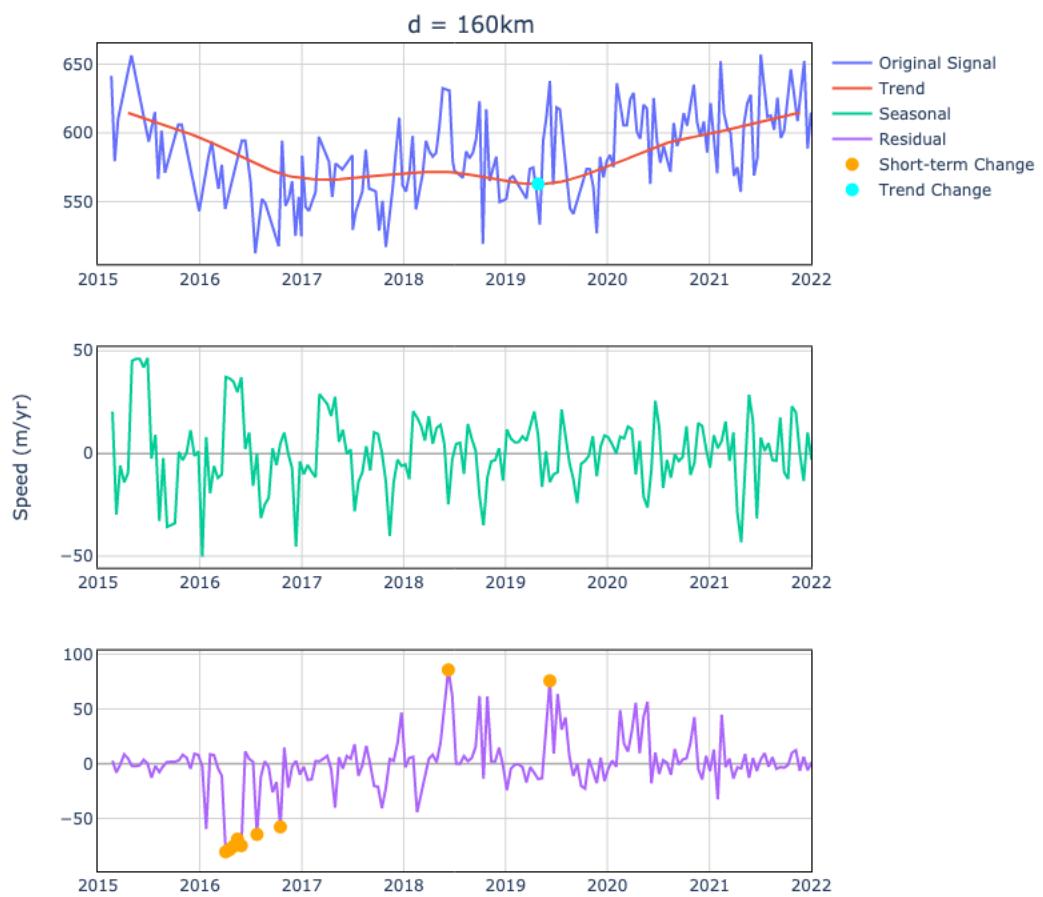

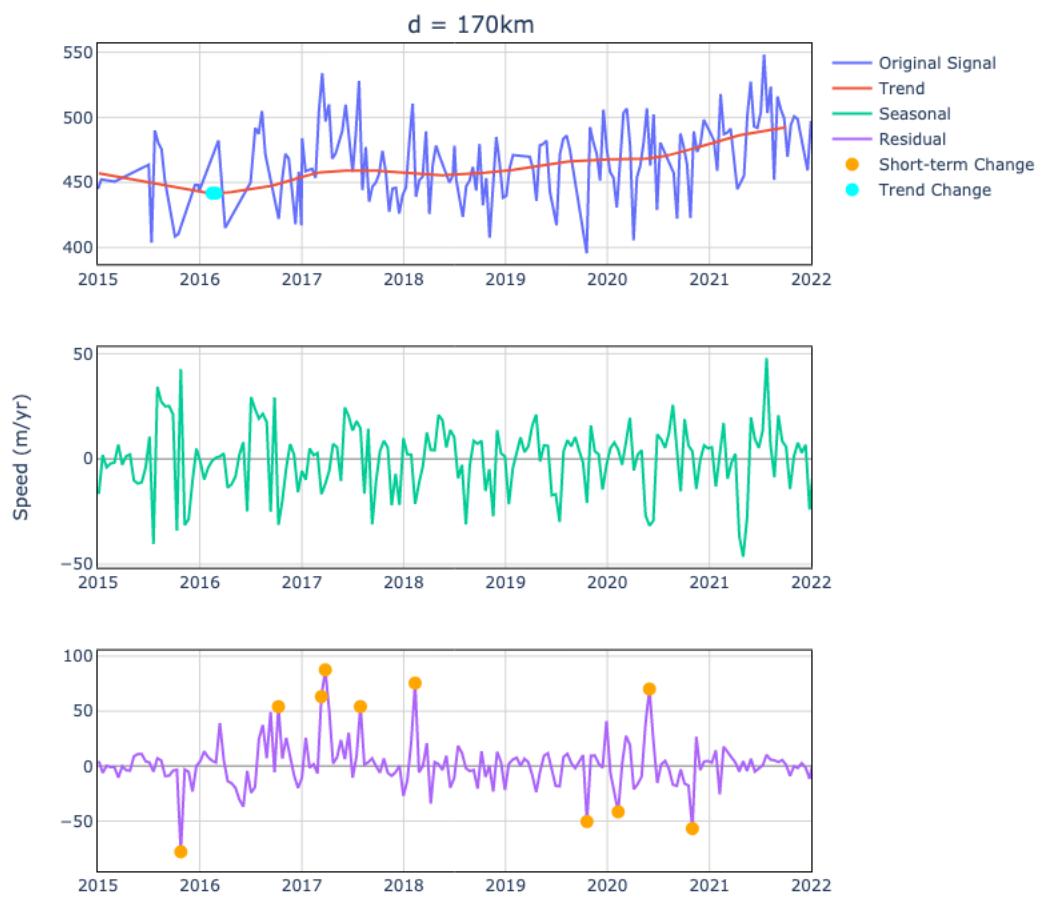

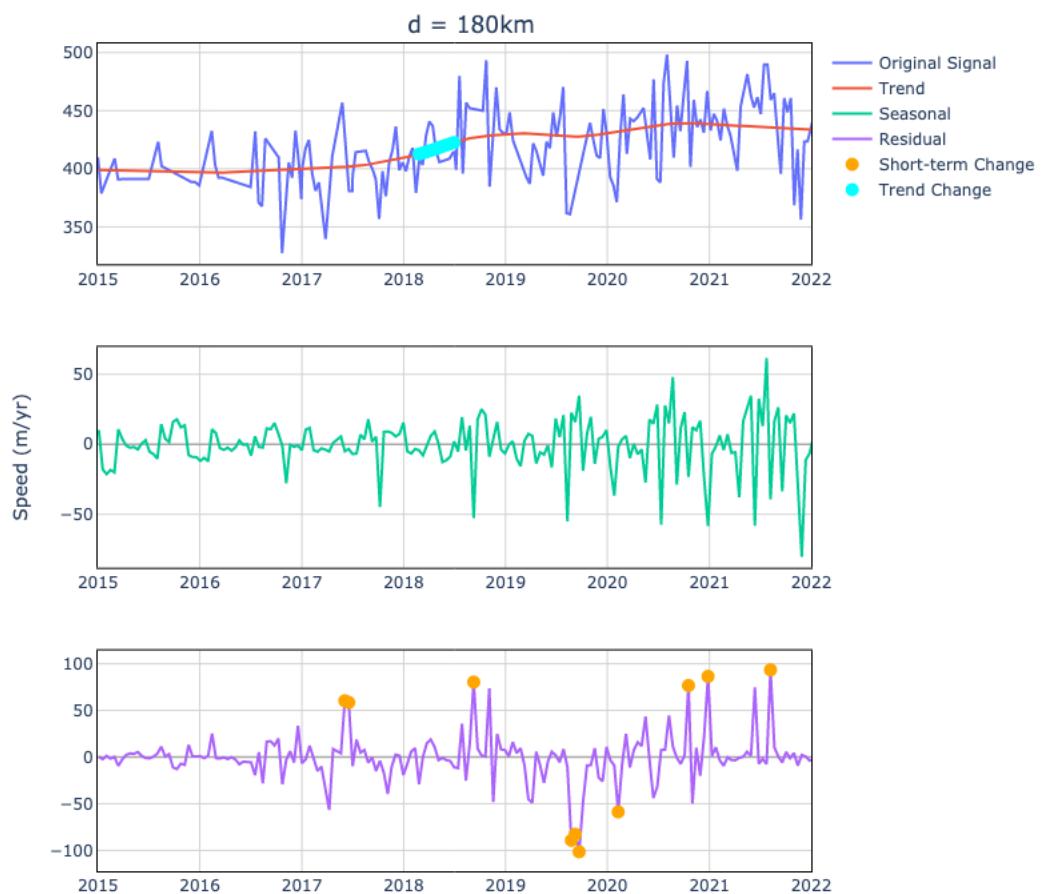

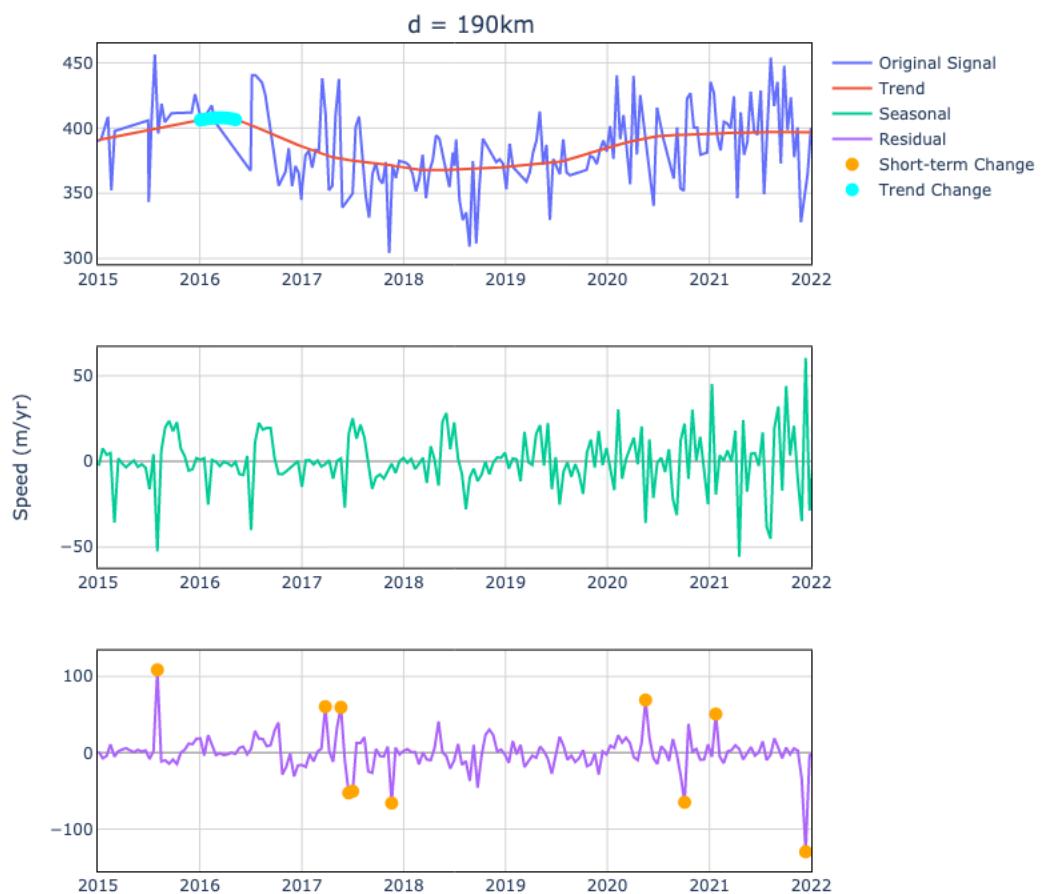

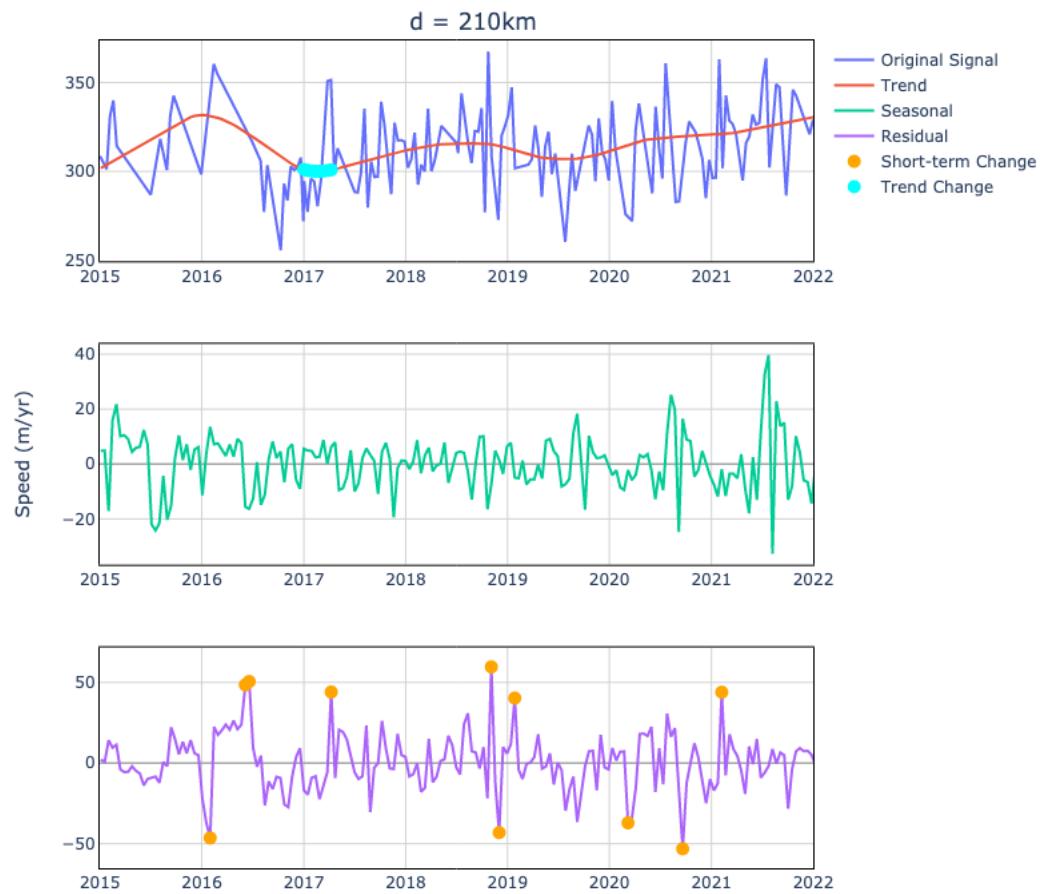

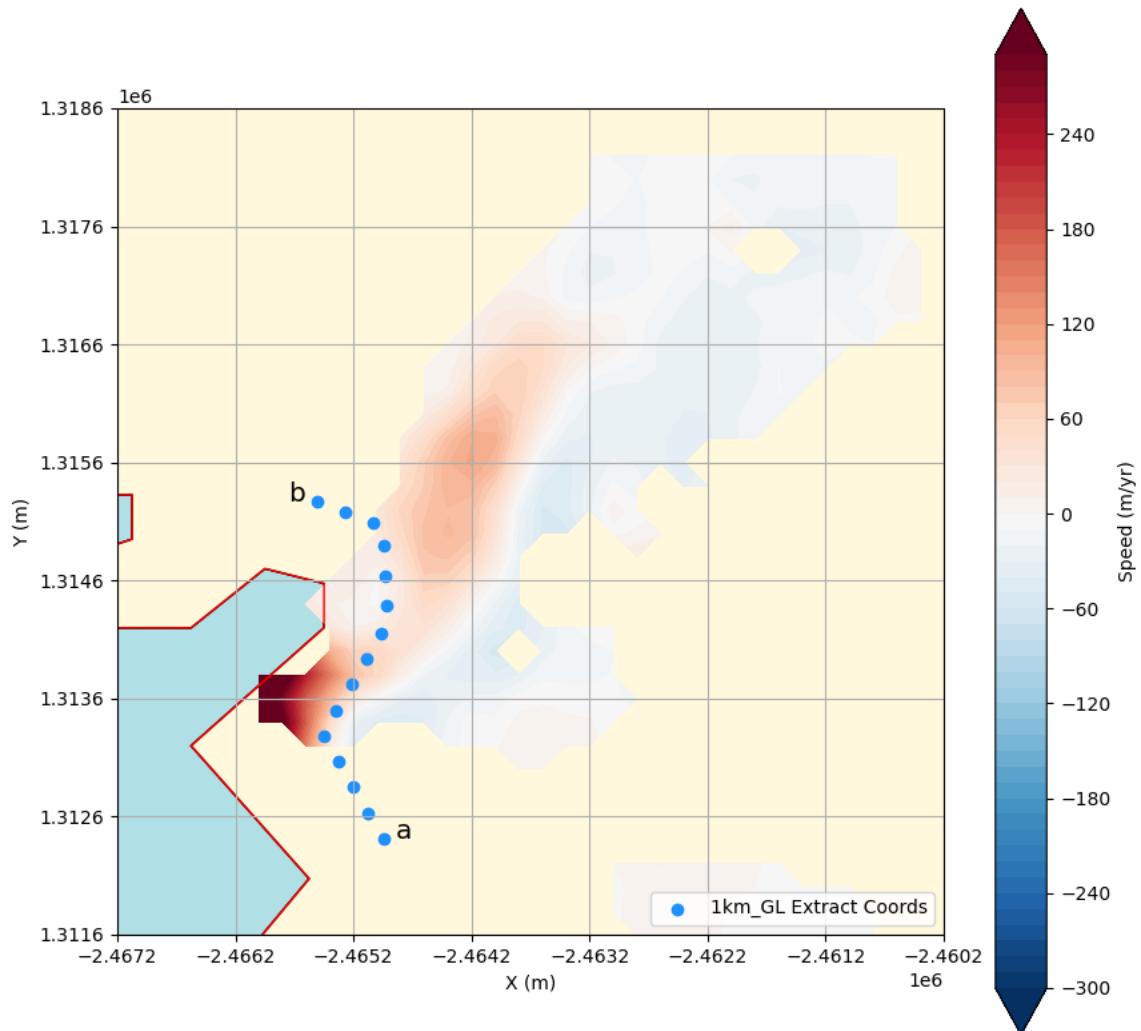

Leonardo Glacier (LEO) profile 1km upstream of the grounding line:

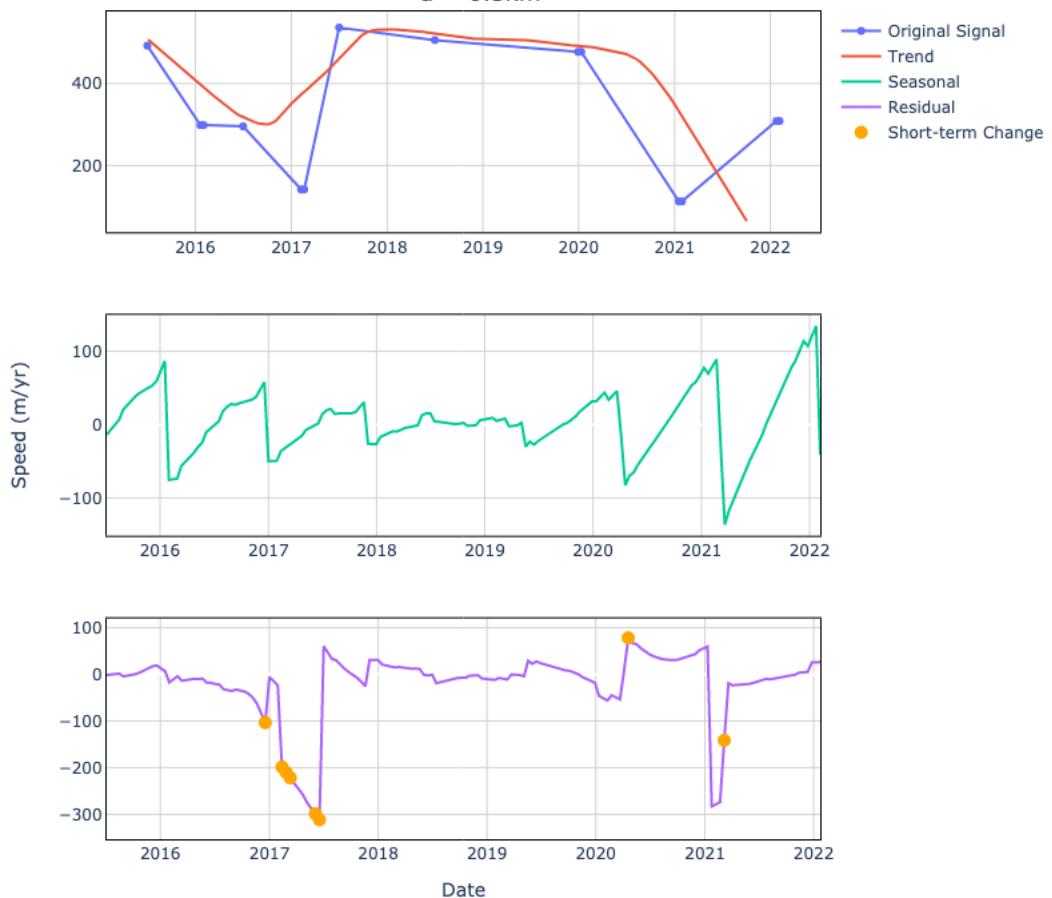

Point a is the start point ($d = 0\text{km}$) and b is the end point ($d = 3.5\text{km}$). Extraction points are spaced 0.5km apart.

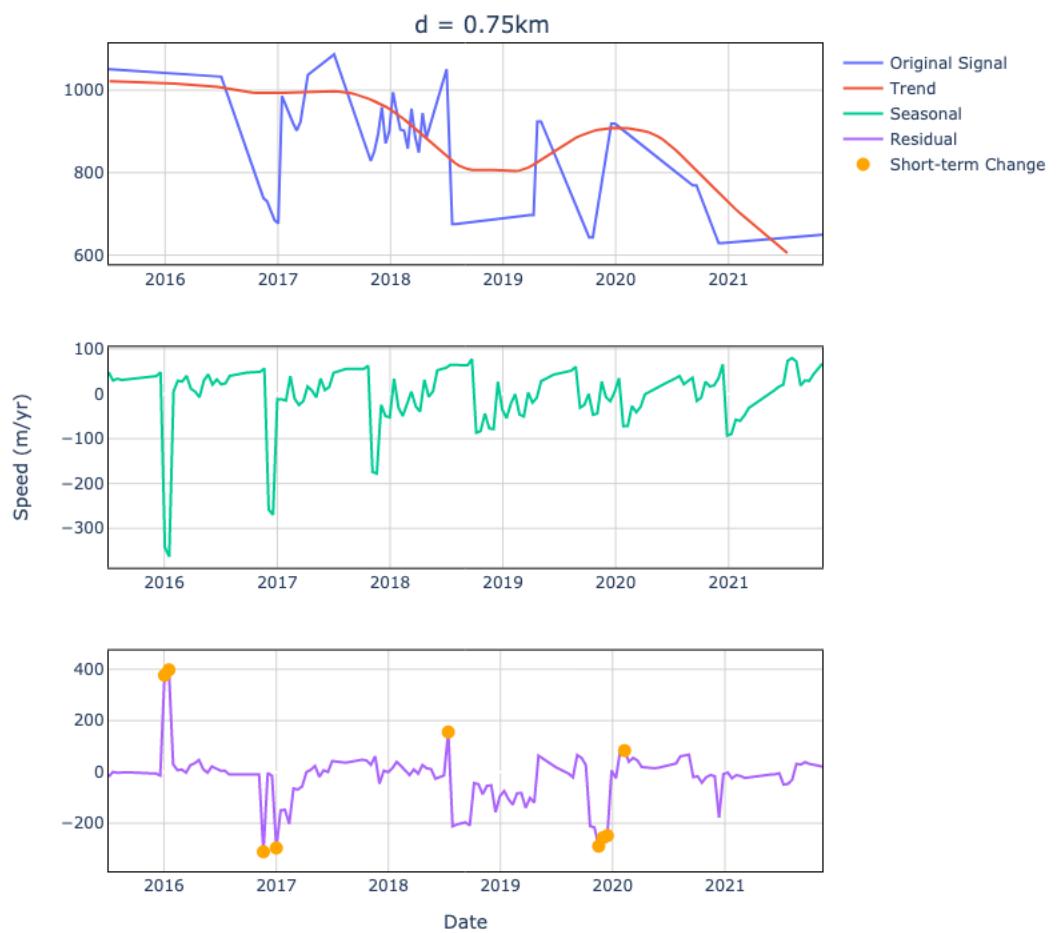

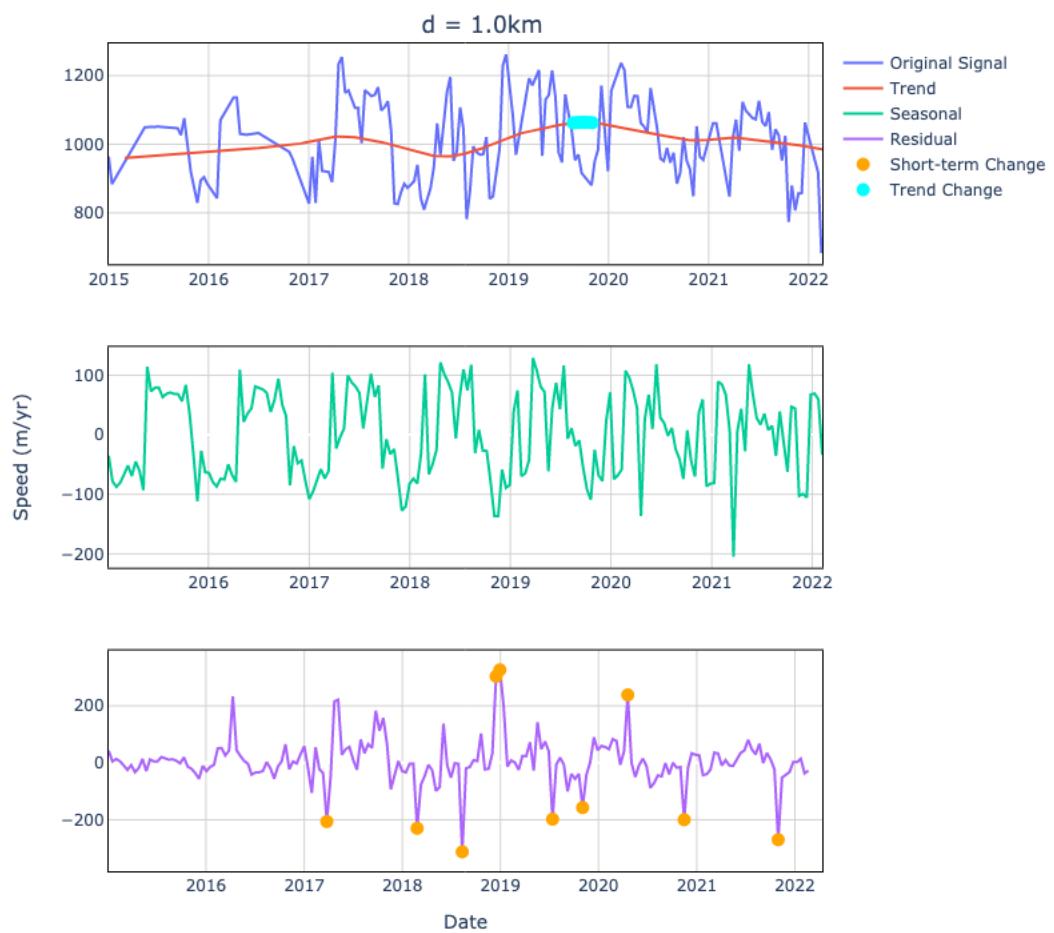

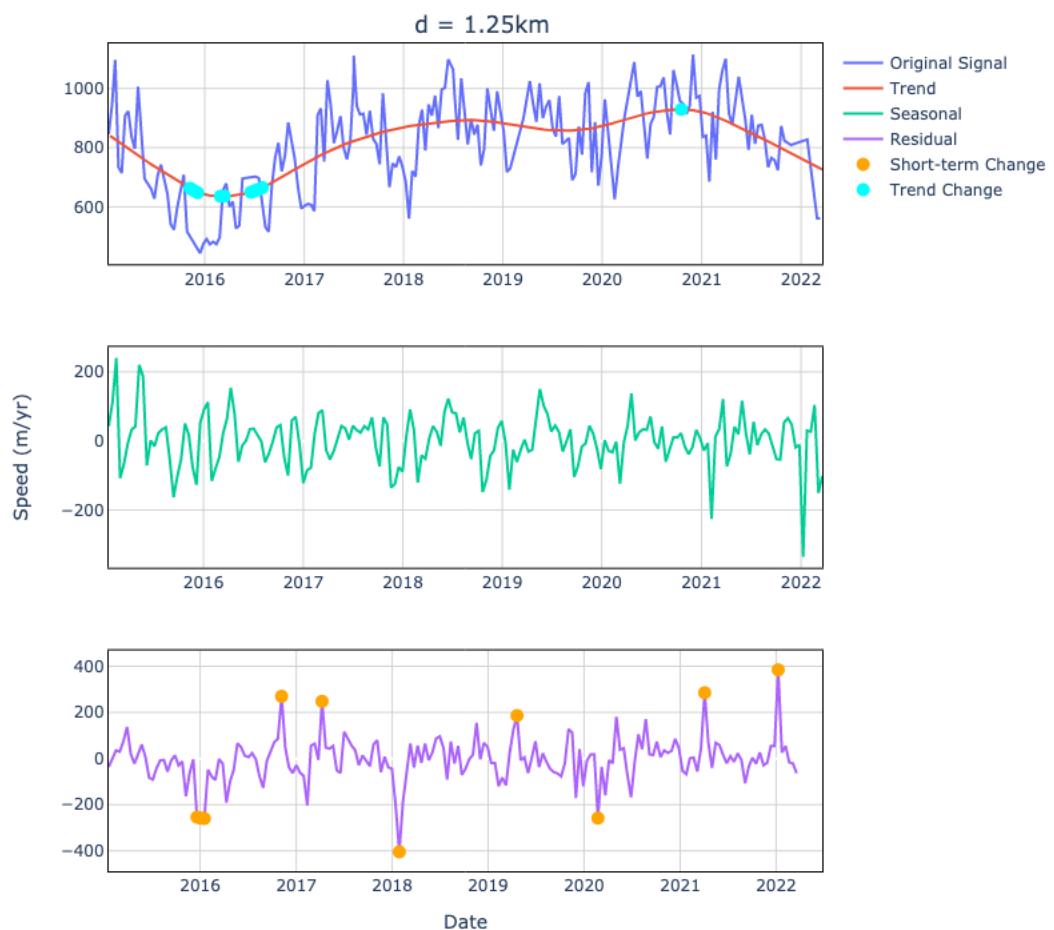

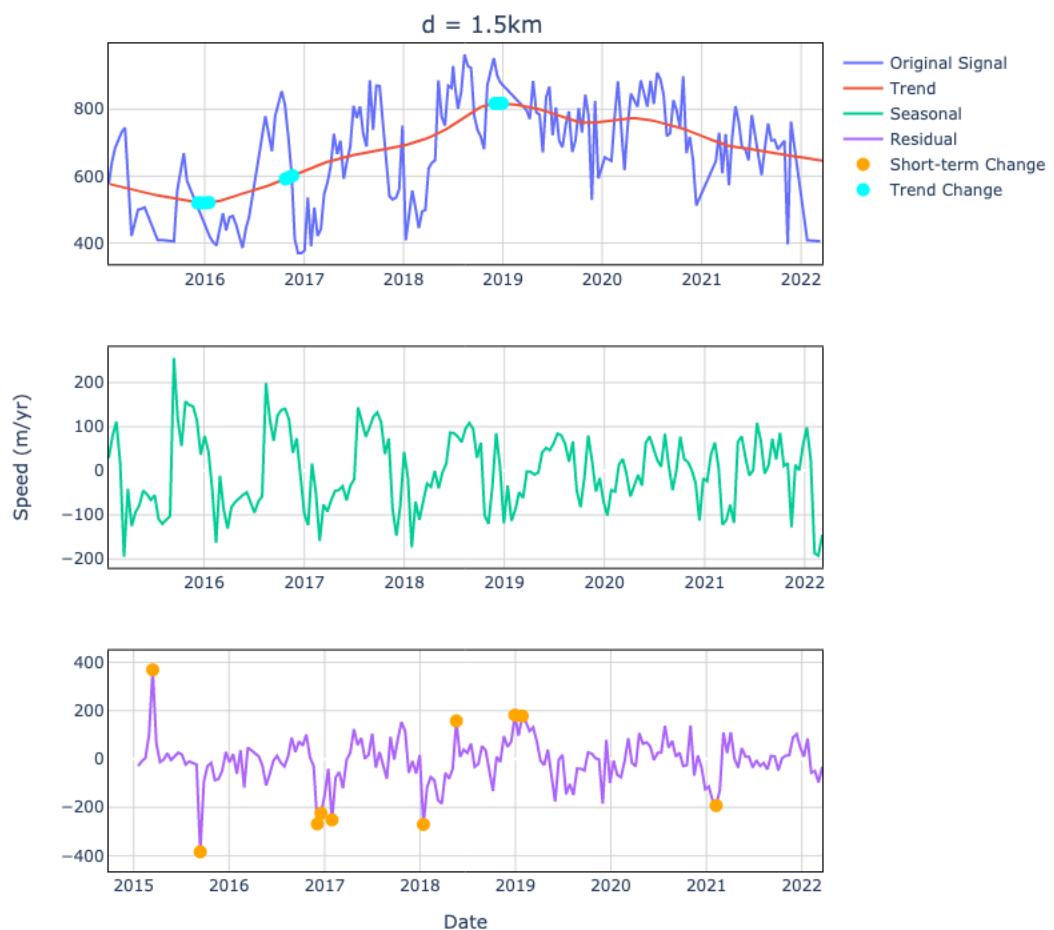

$d = 0.5\text{km}$

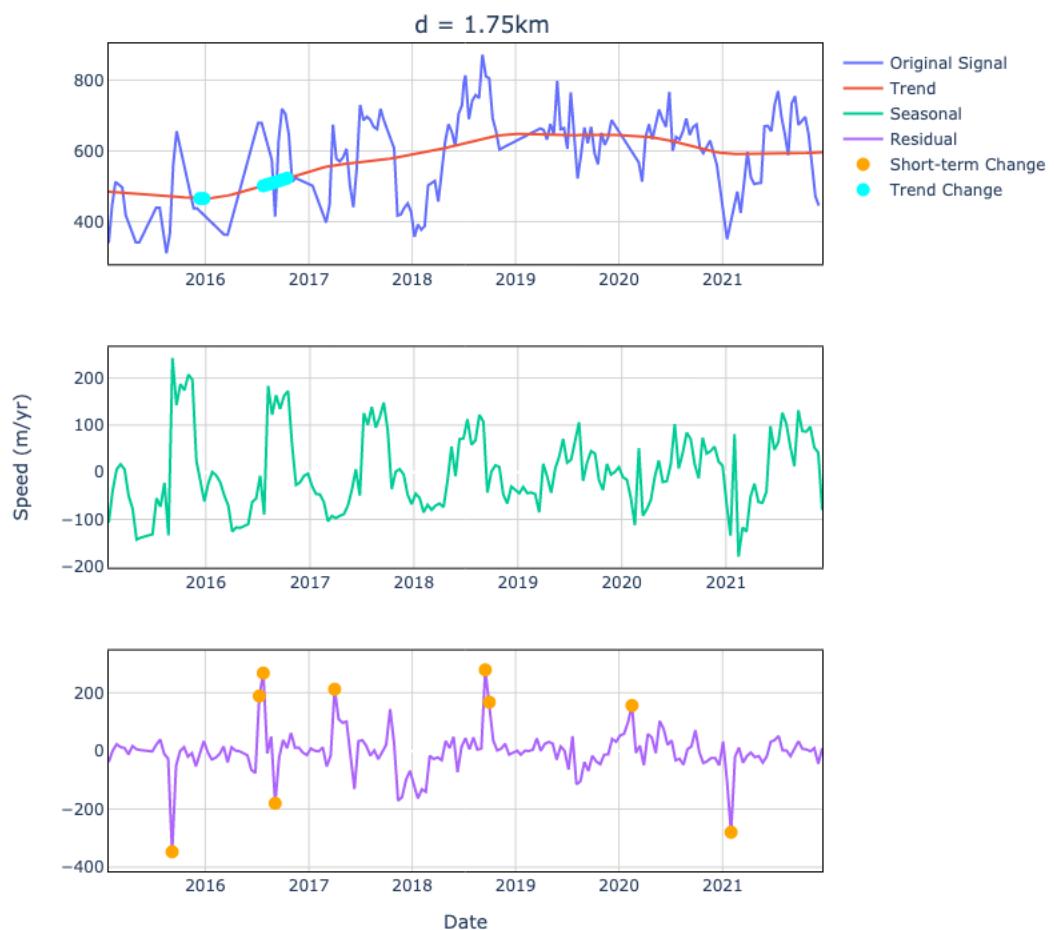

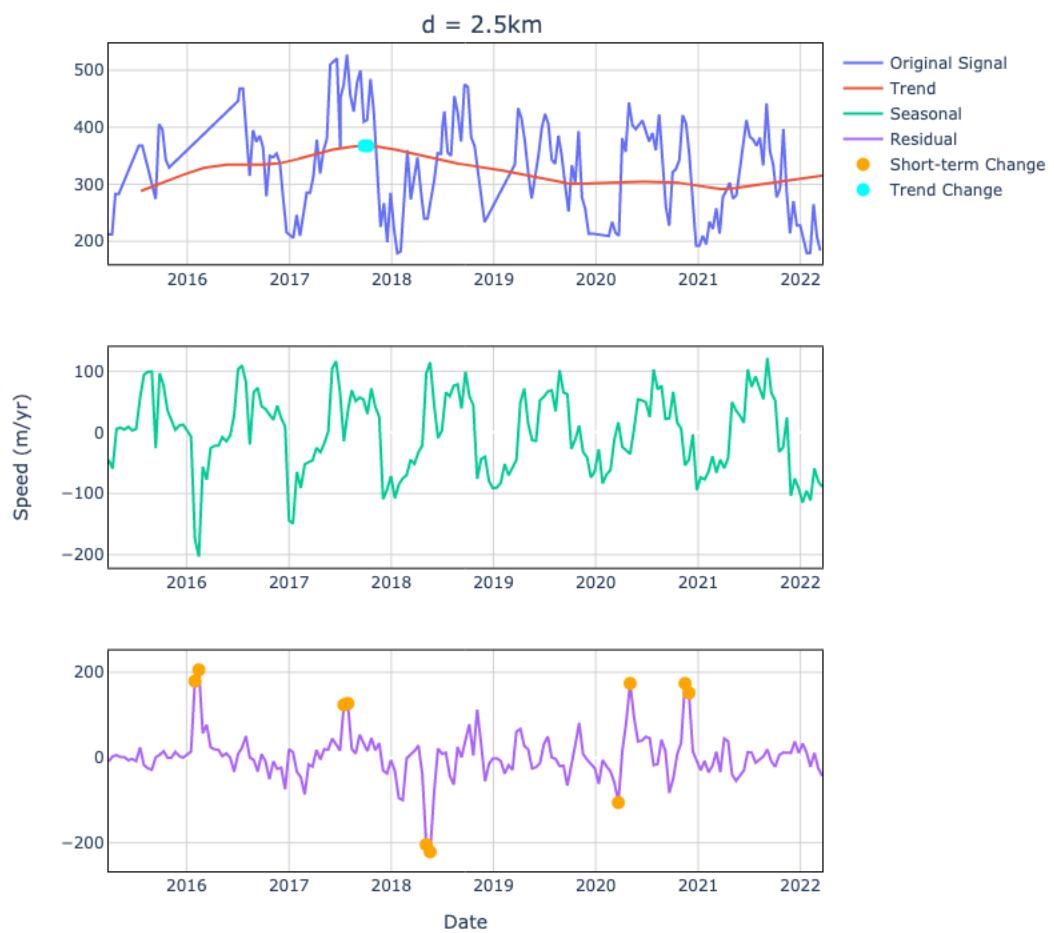

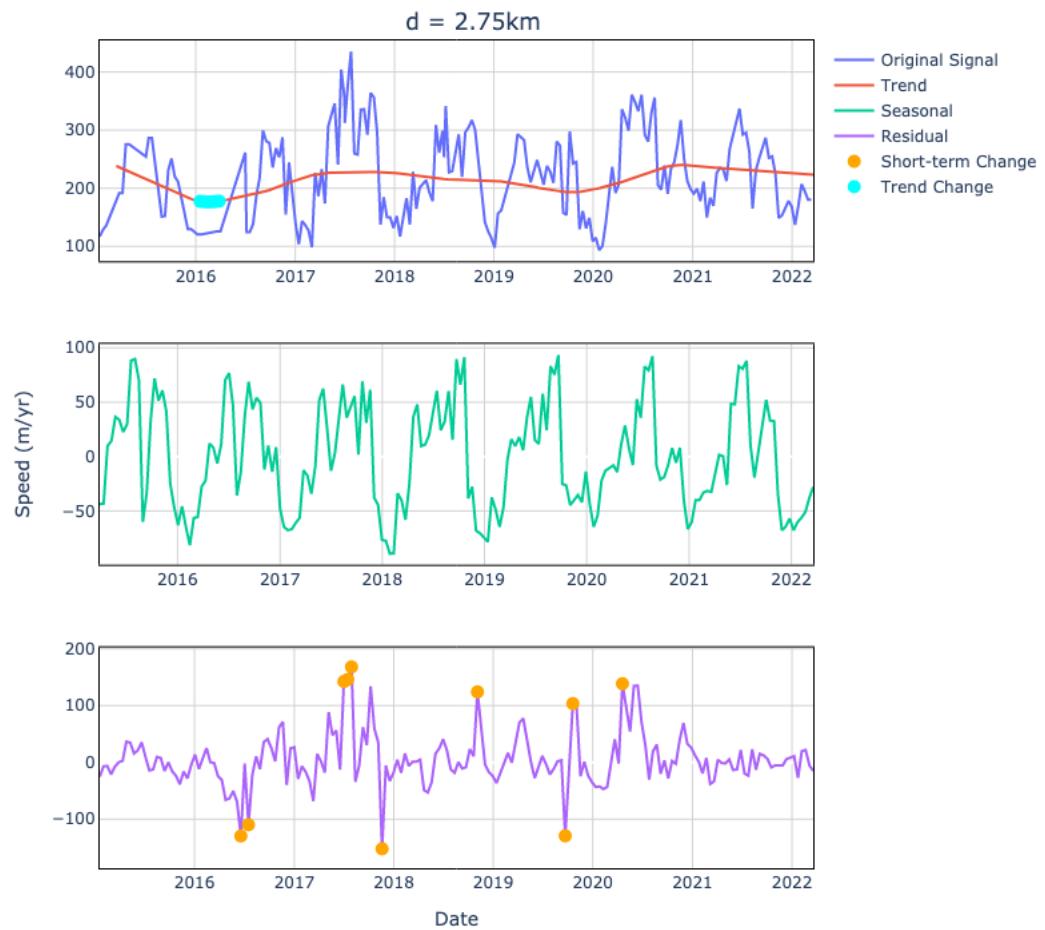

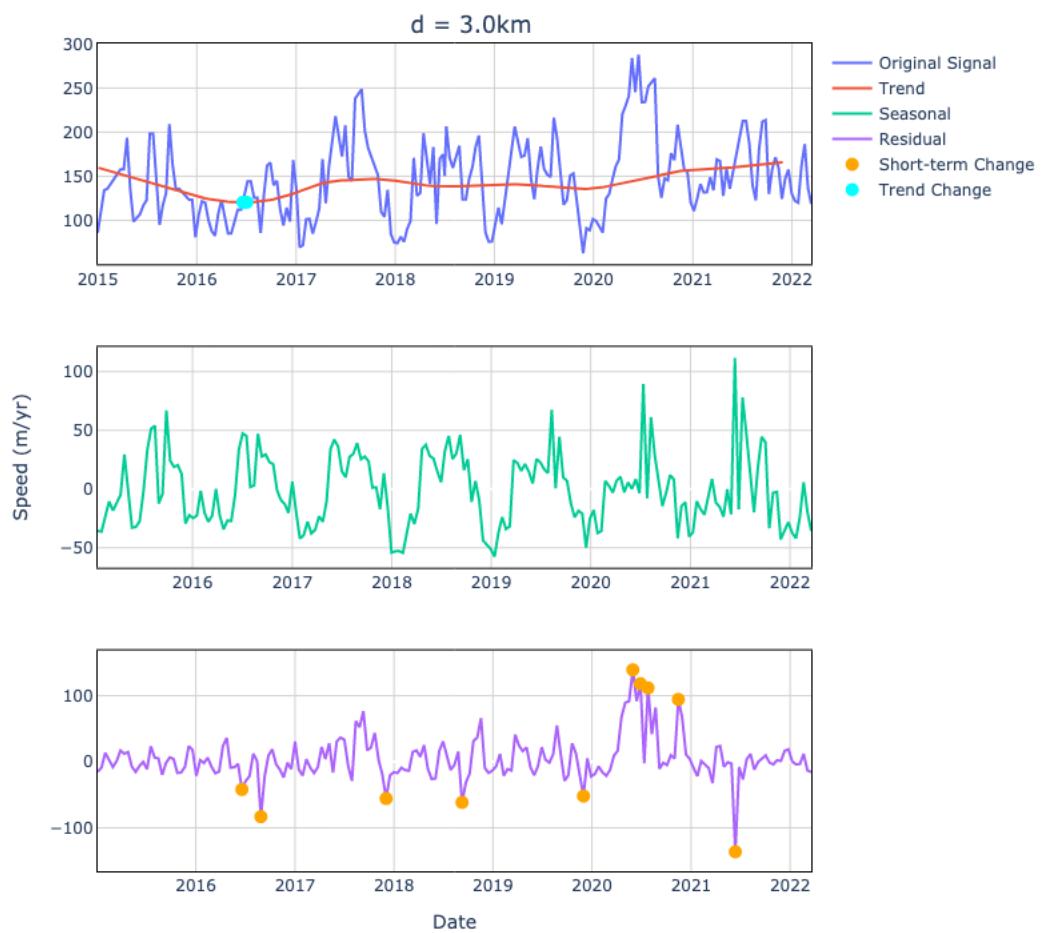

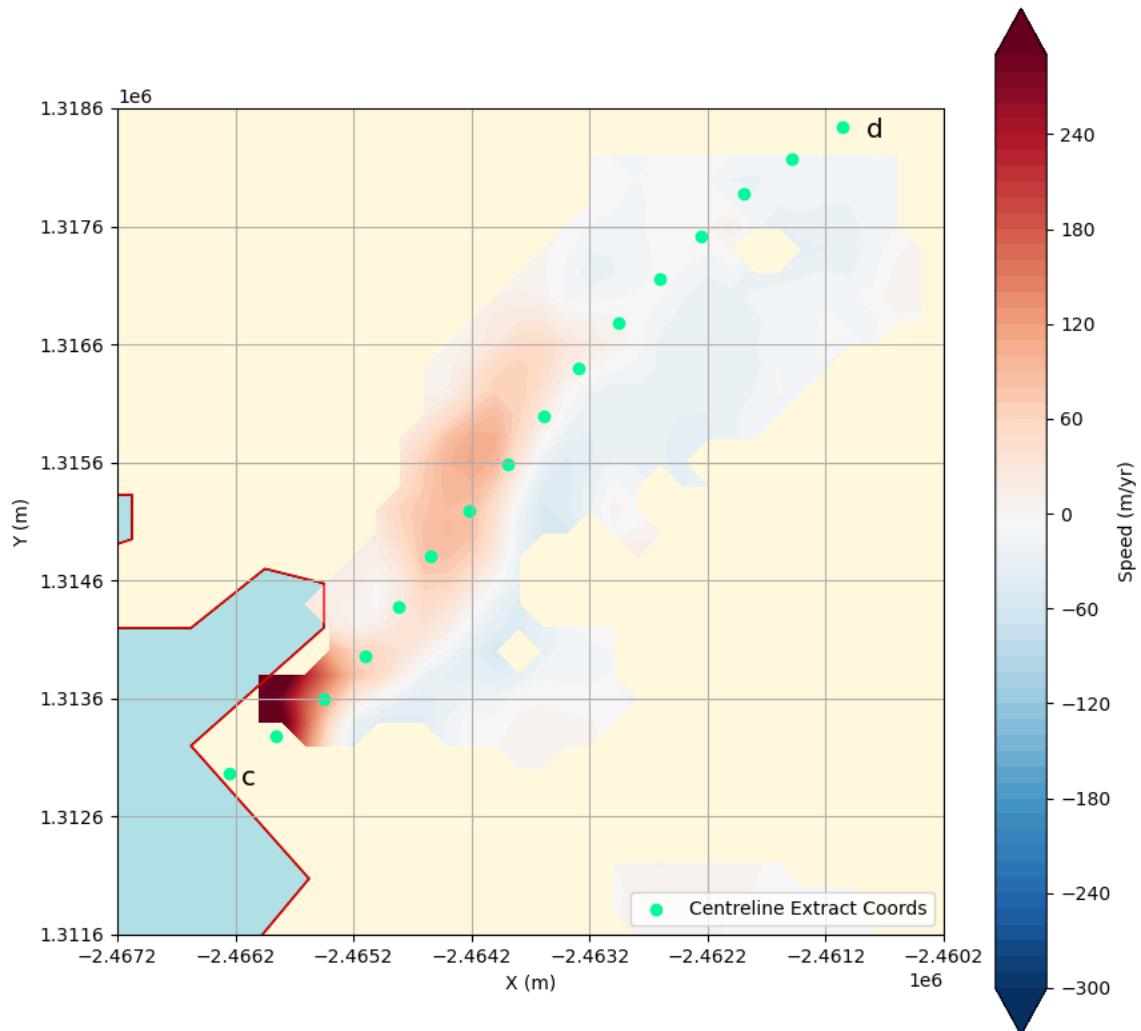

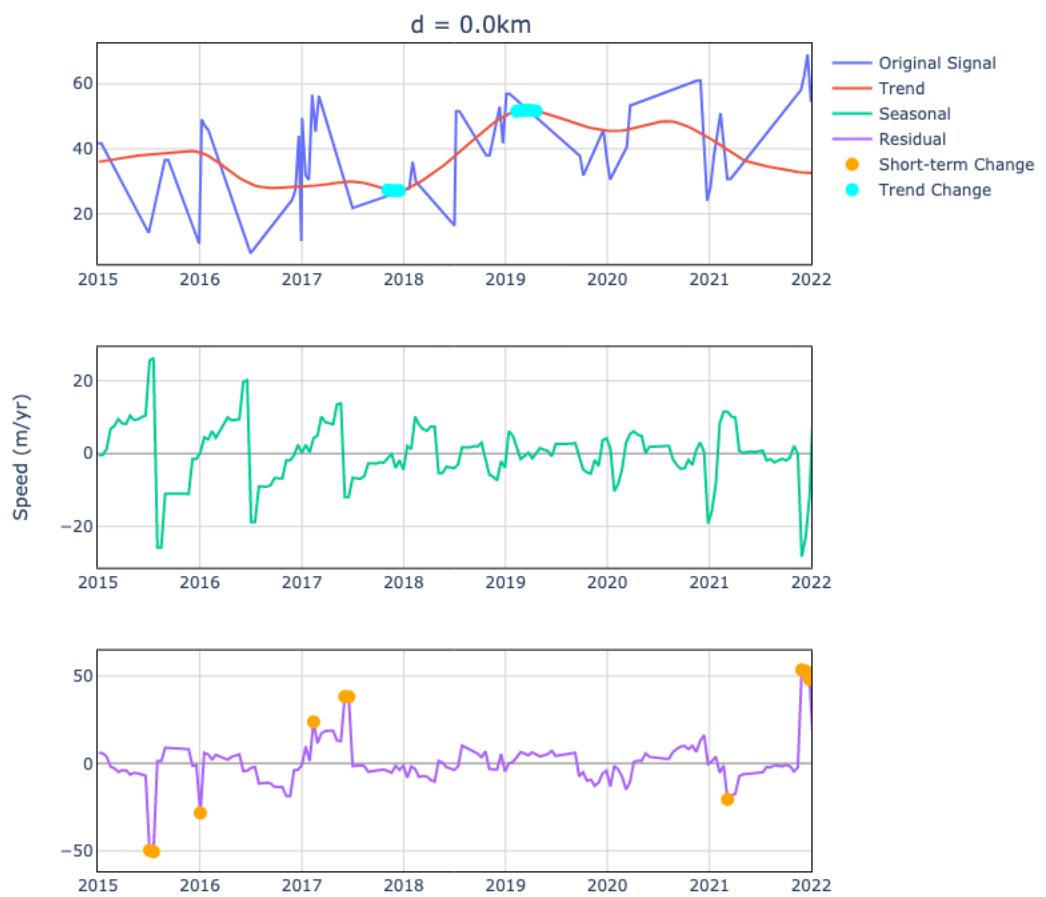

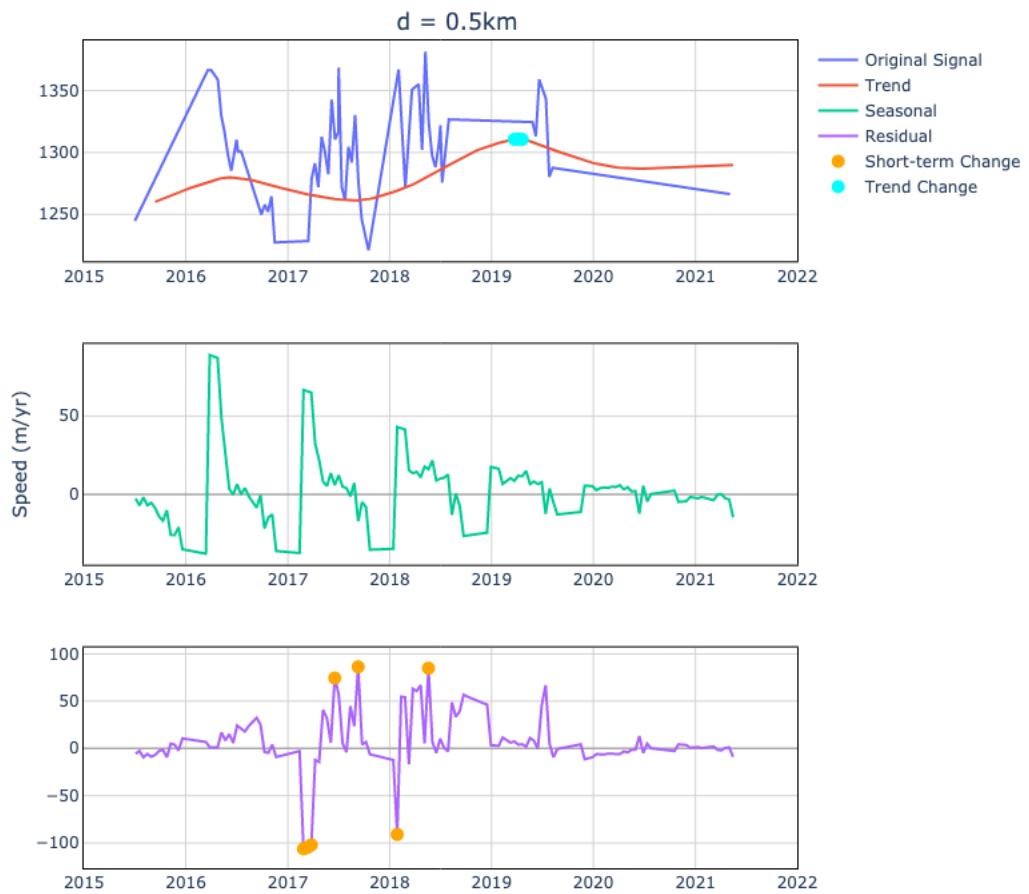

Leonardo Glacier (LEO) profile along the centreline of the glacier:

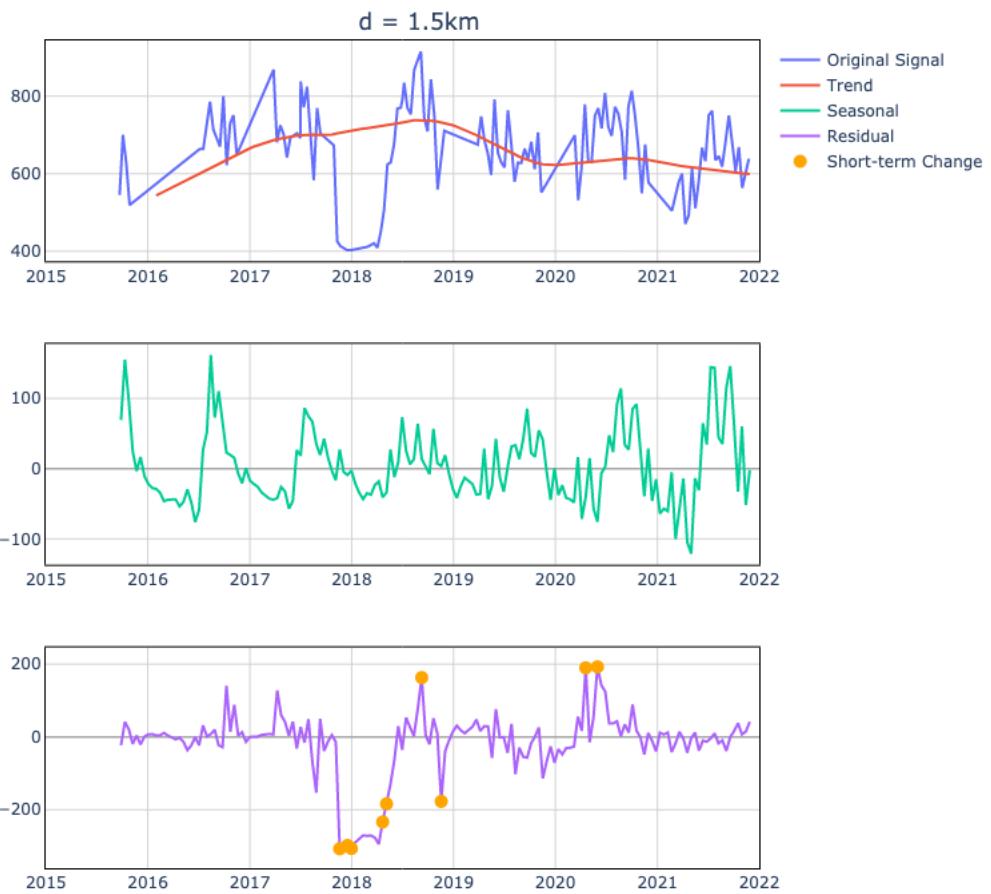

Point c is the start point ($d = 0\text{km}$) and d is the end point ($d = 7.5\text{km}$). Extraction points are spaced 0.5km apart.

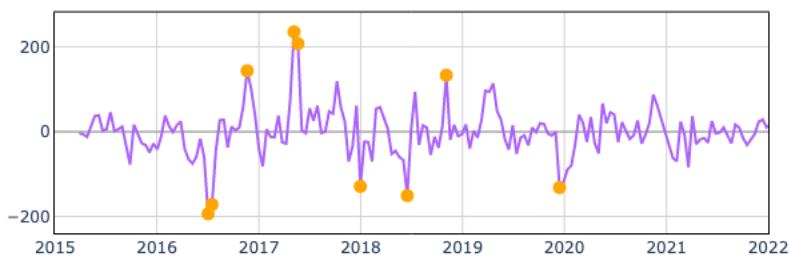

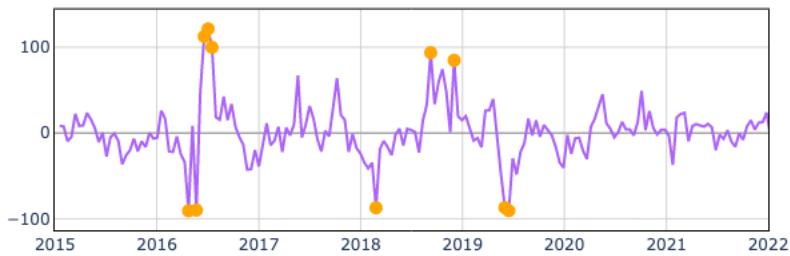

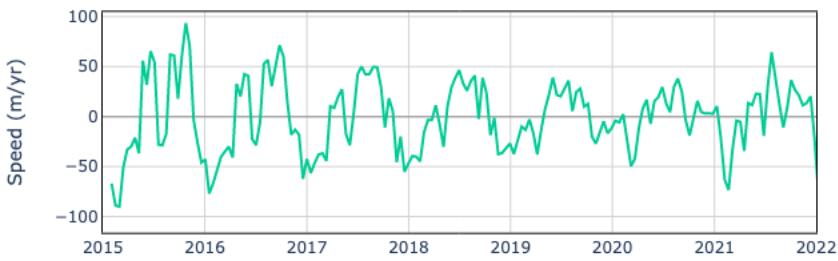

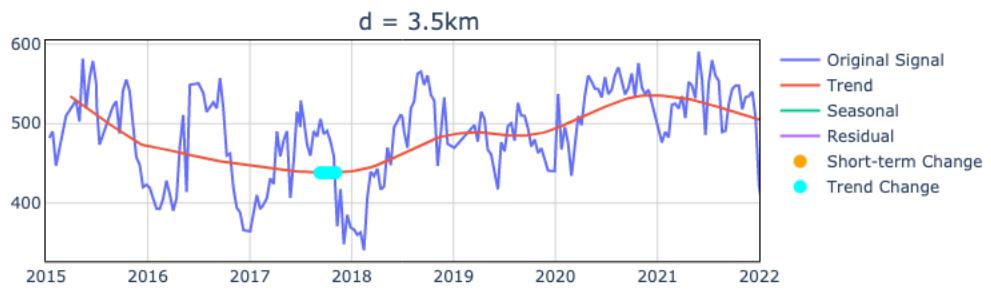

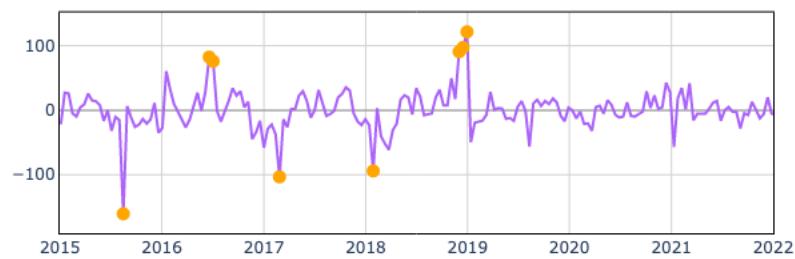

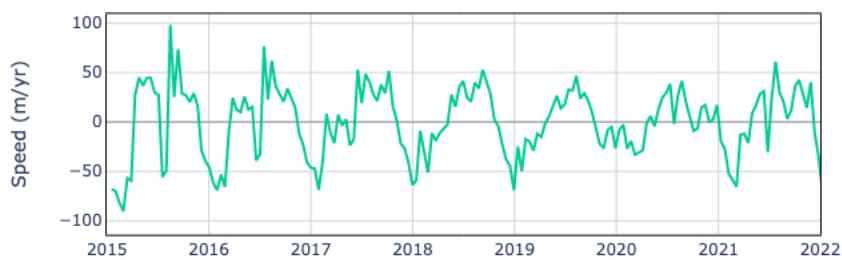

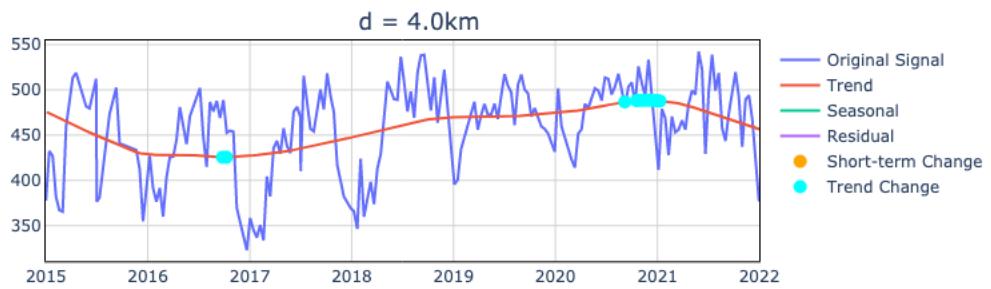

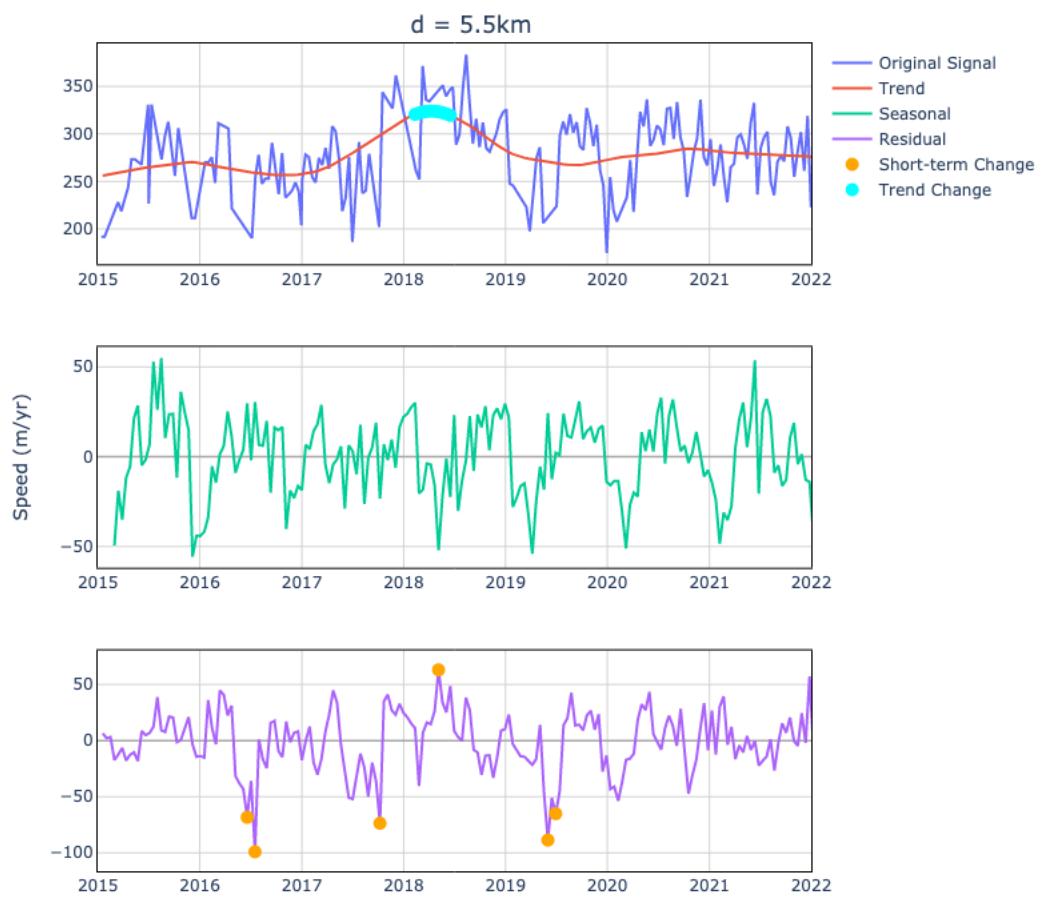

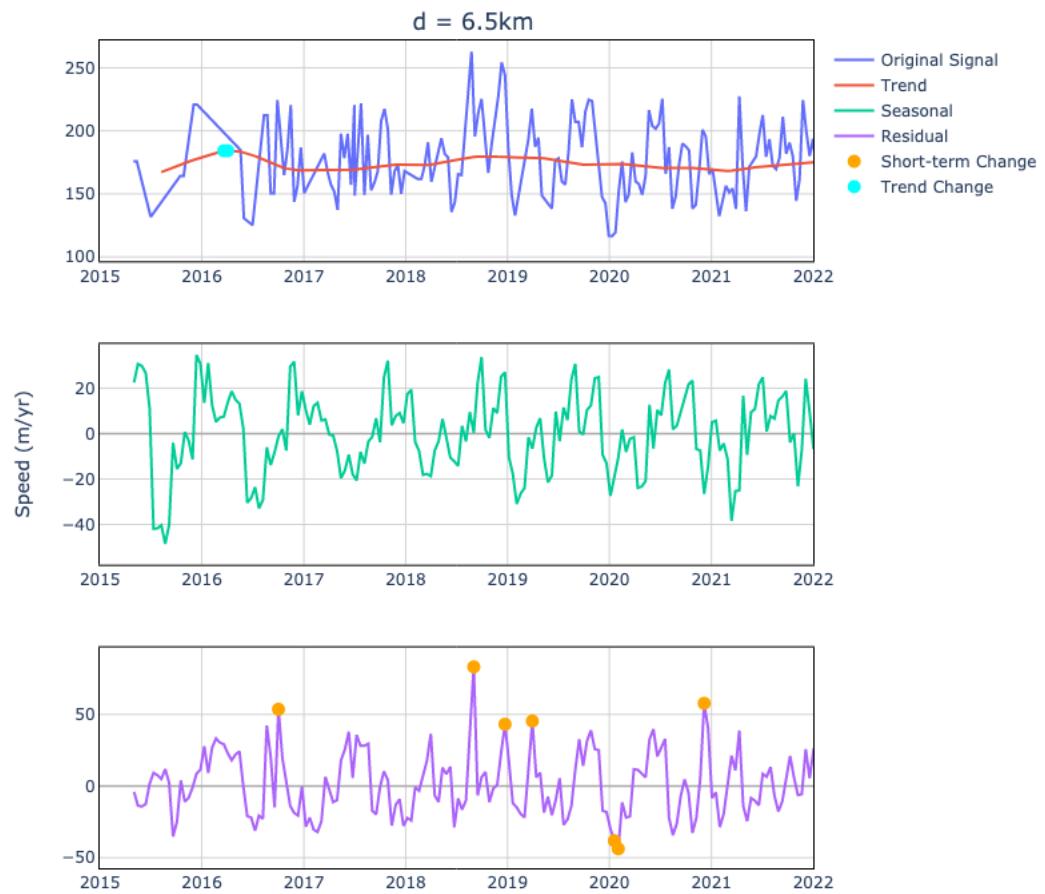

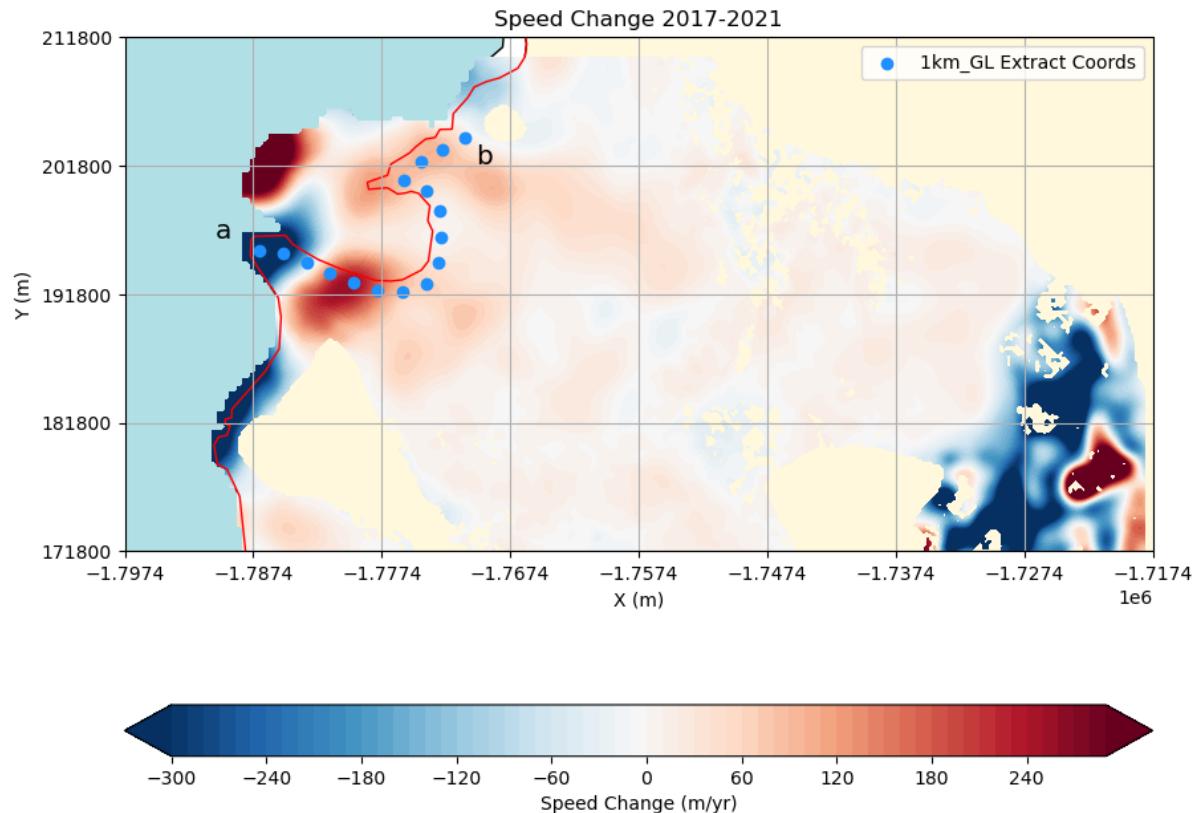

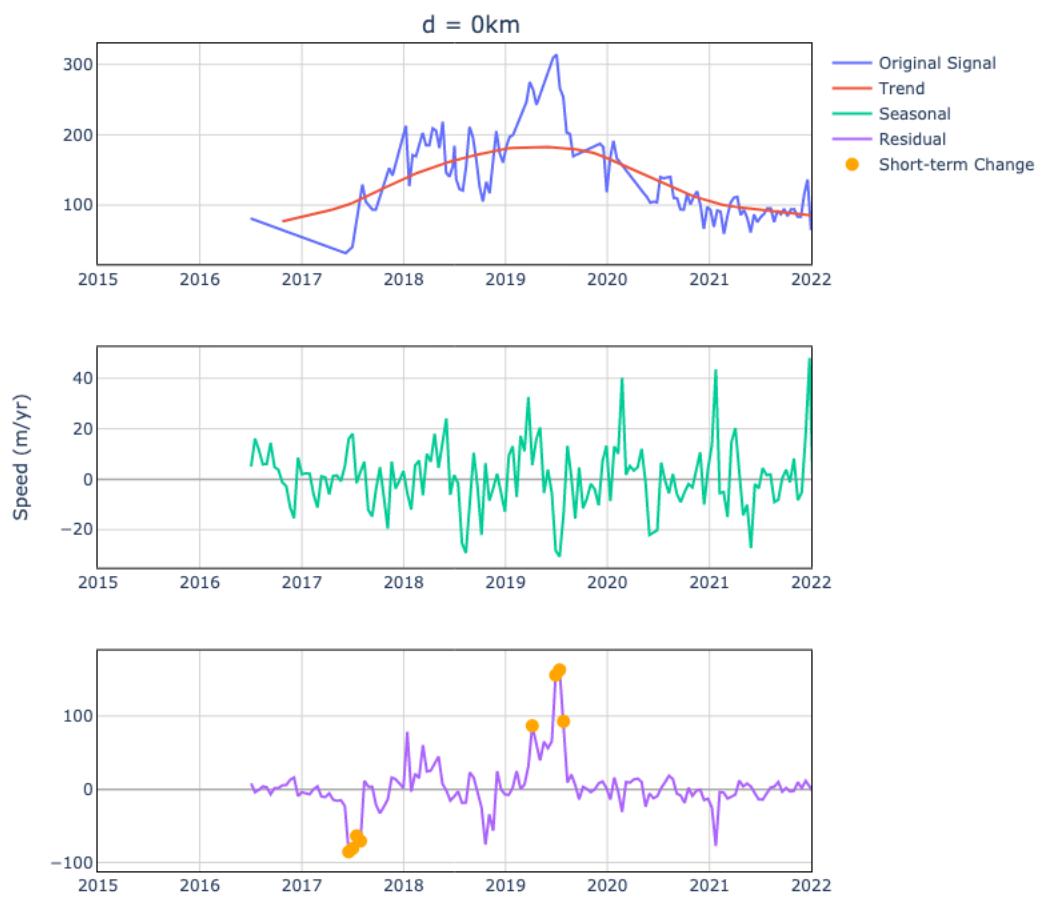

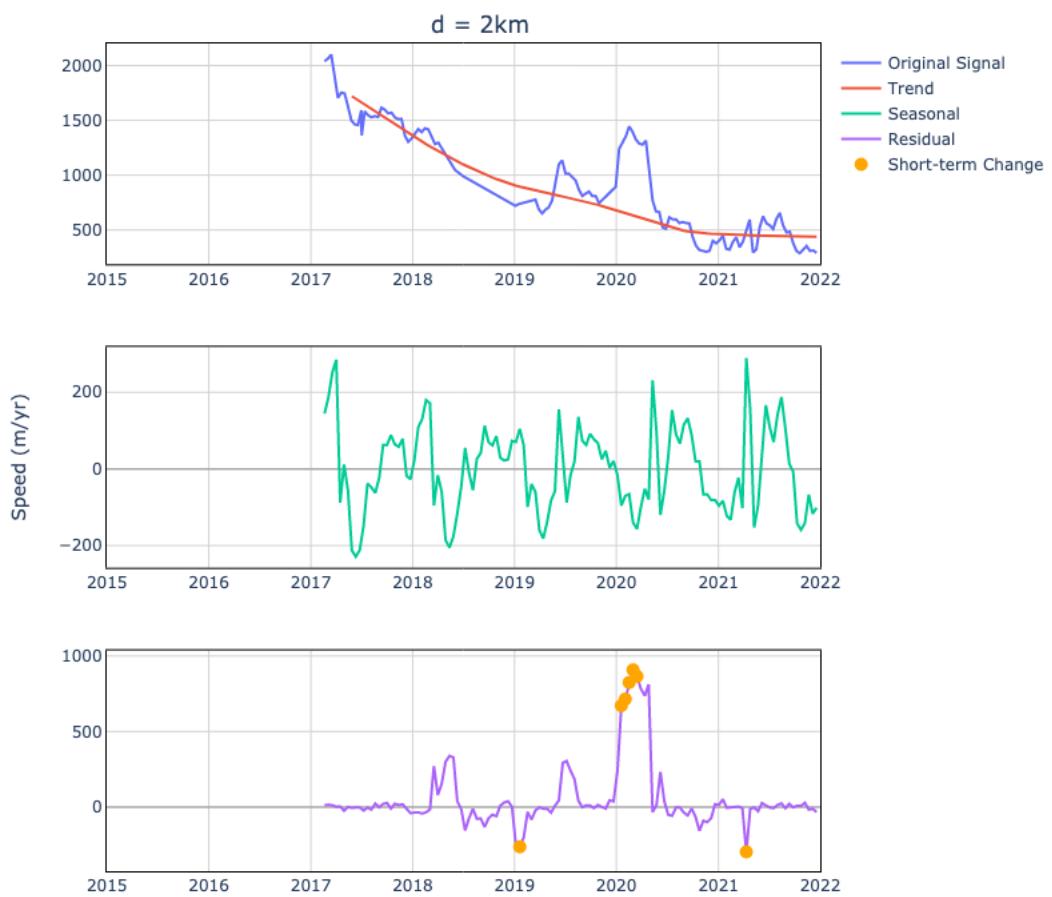

Ferrigno Ice Stream (FIS) profile 1km upstream of the grounding line:

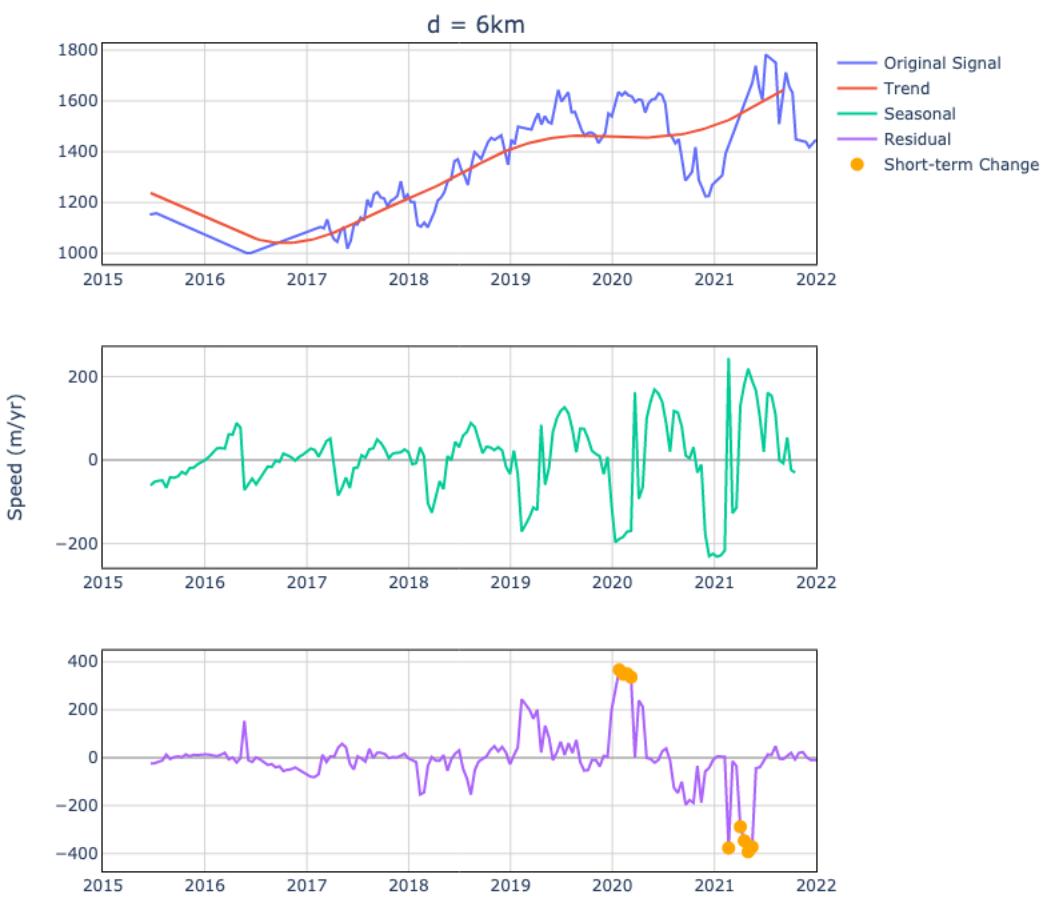

Point a is the start point ($d = 0\text{km}$) and b is the end point ($d = 30\text{km}$). Extraction points are spaced 2km apart.

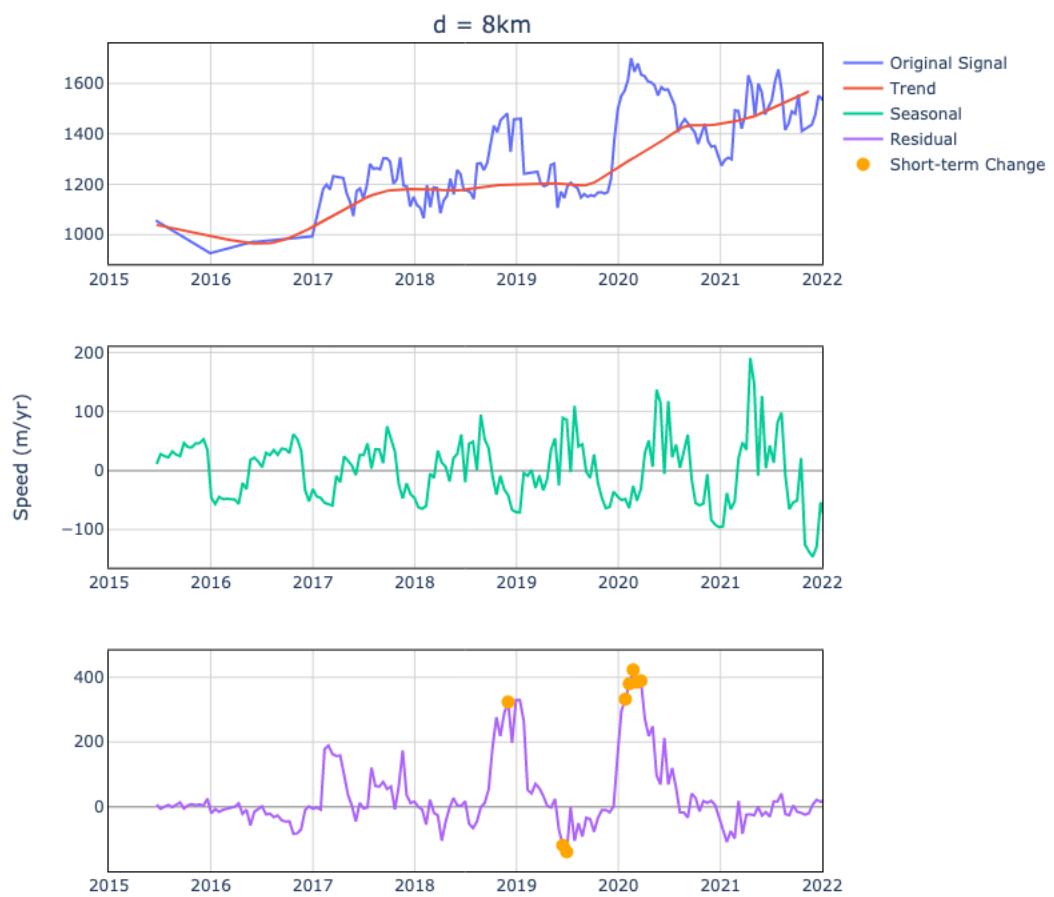

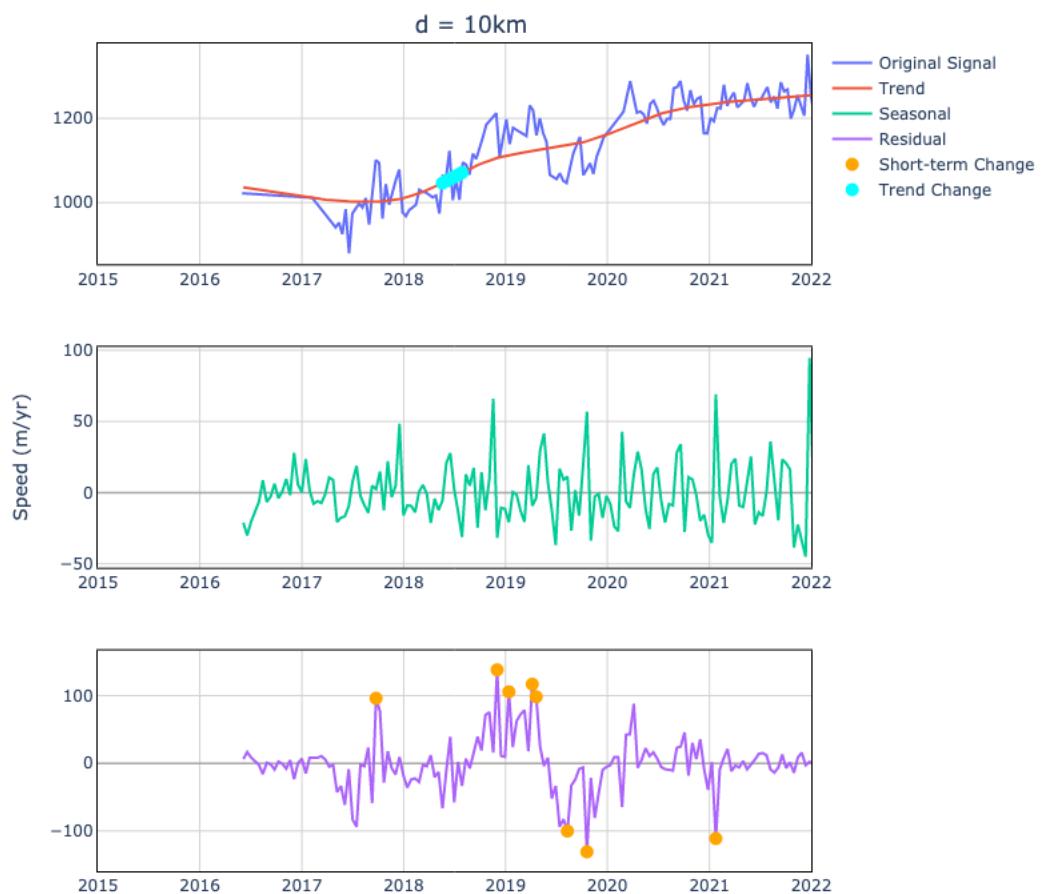

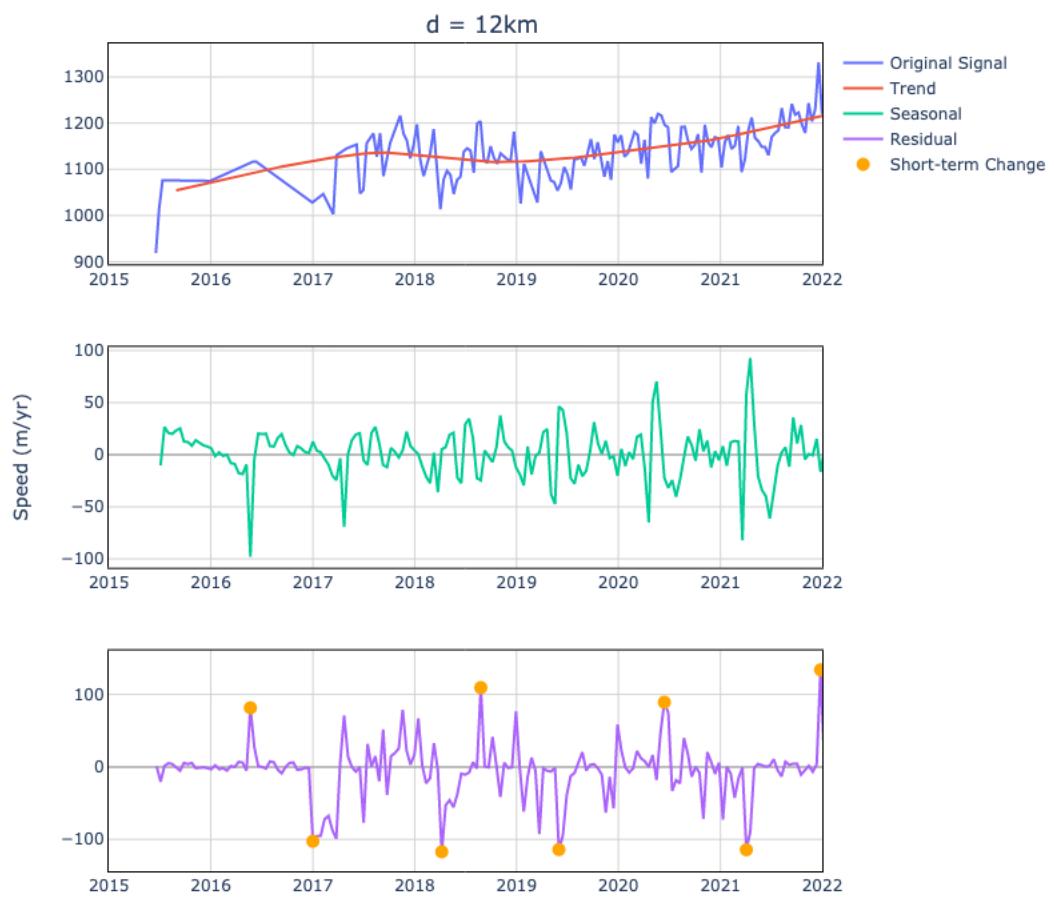

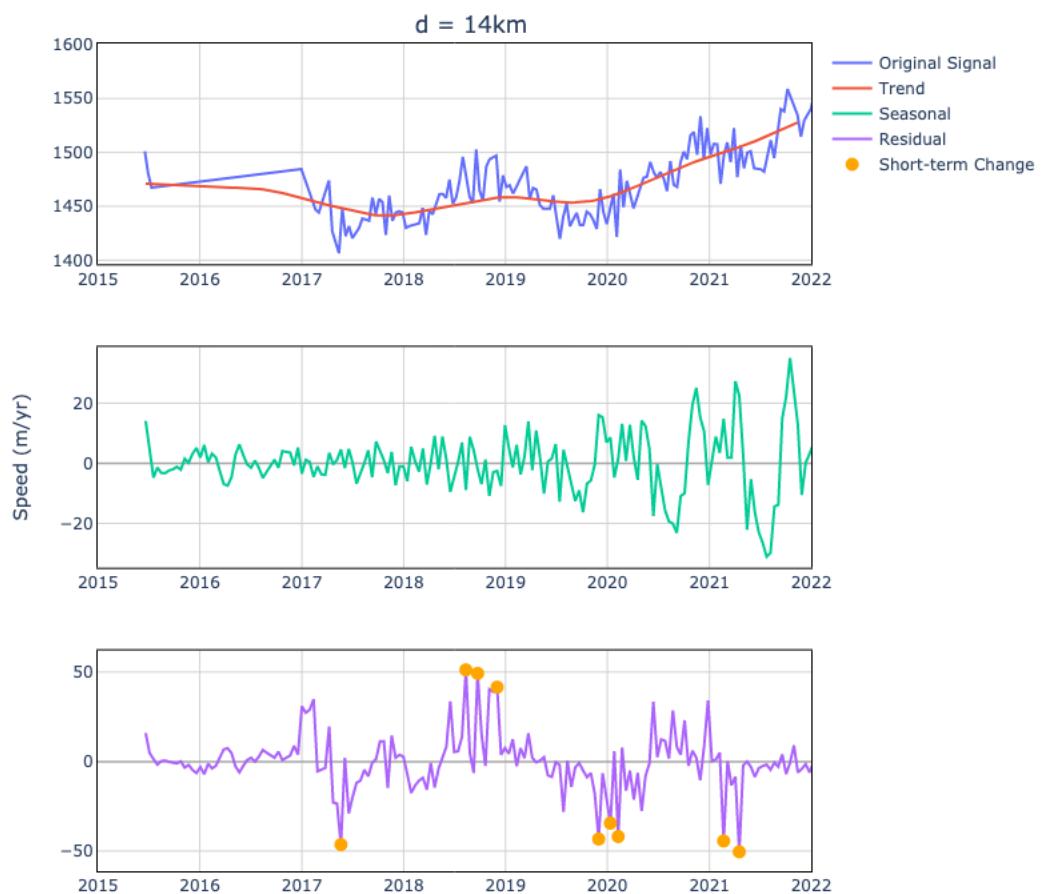

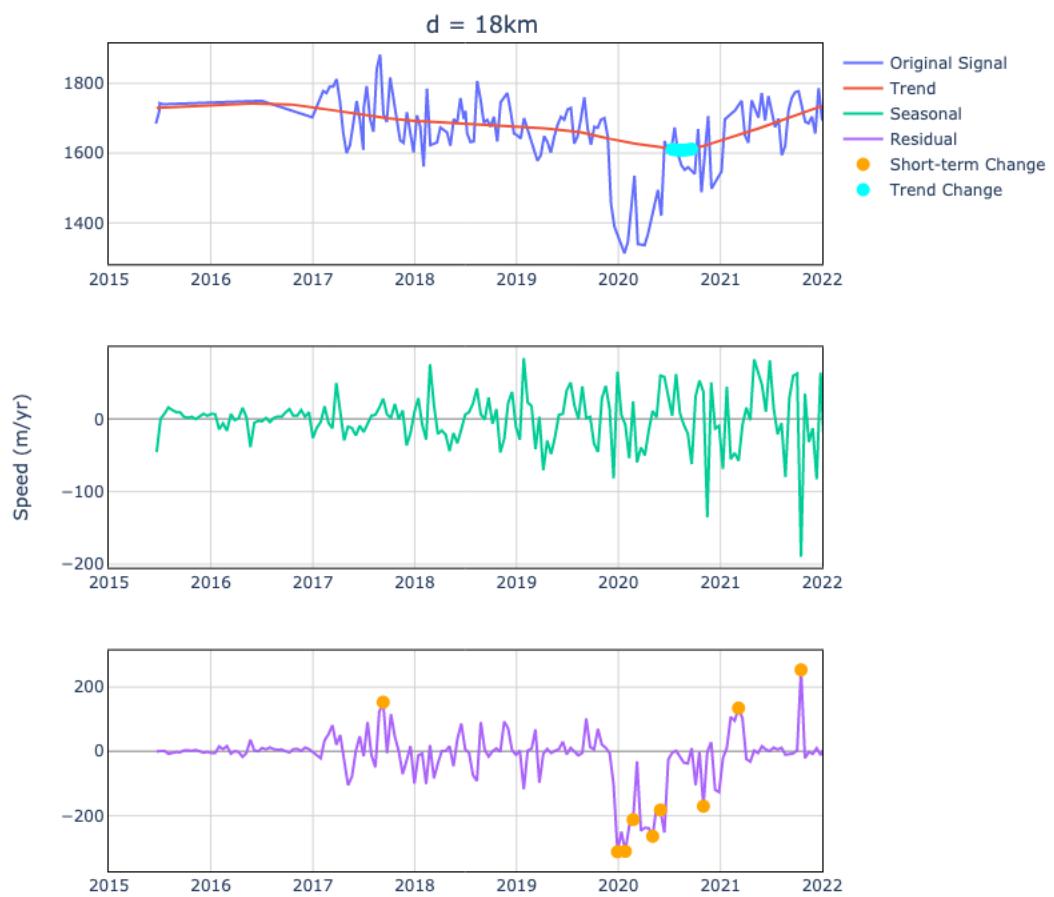

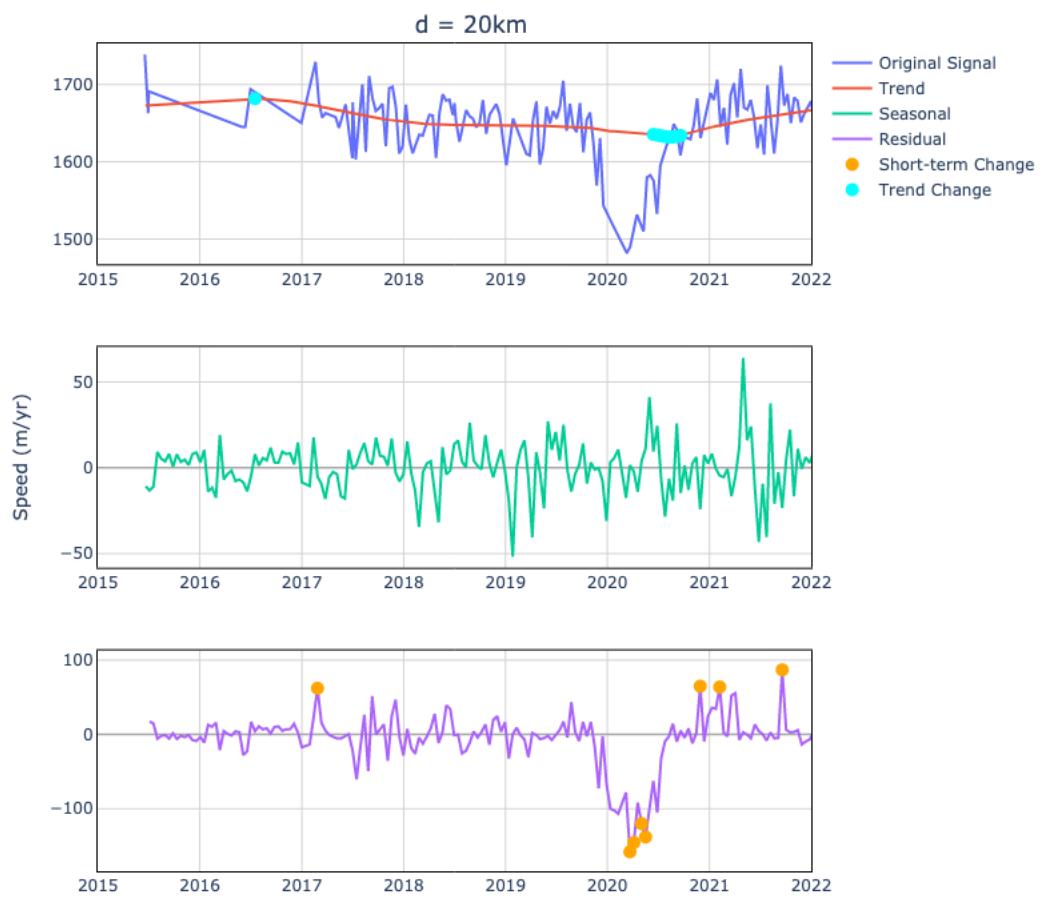

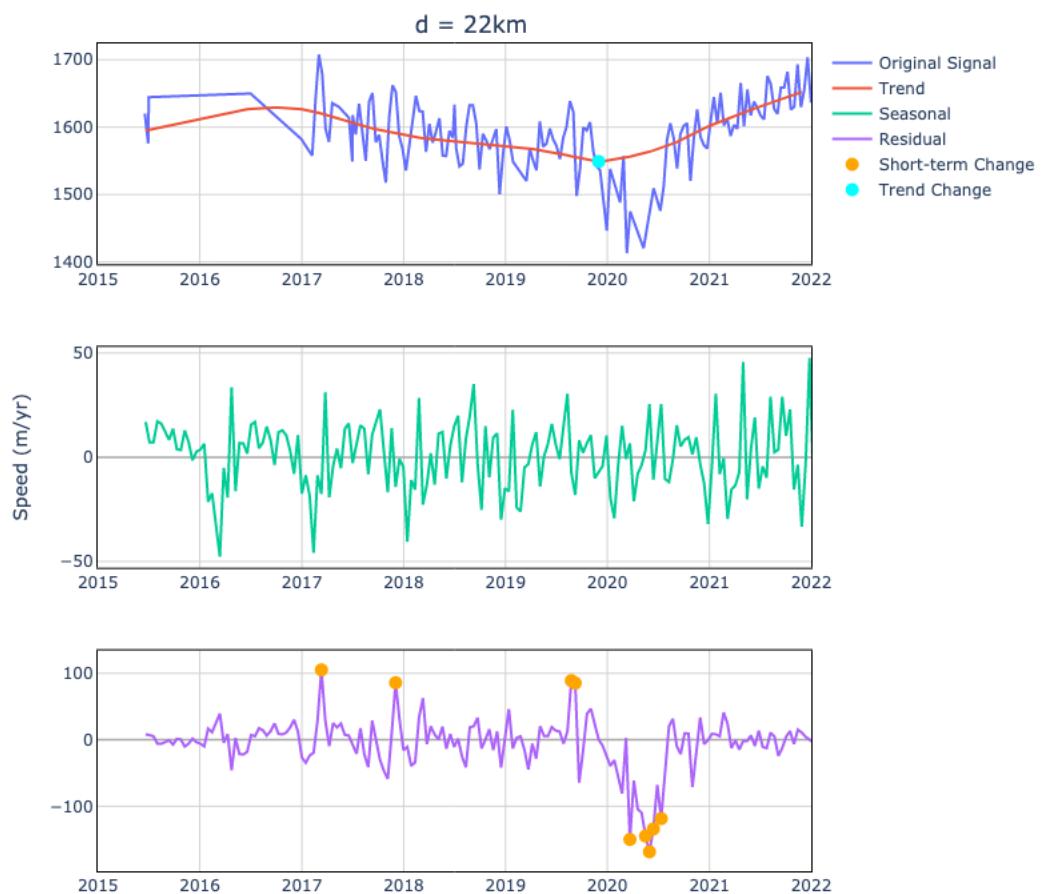

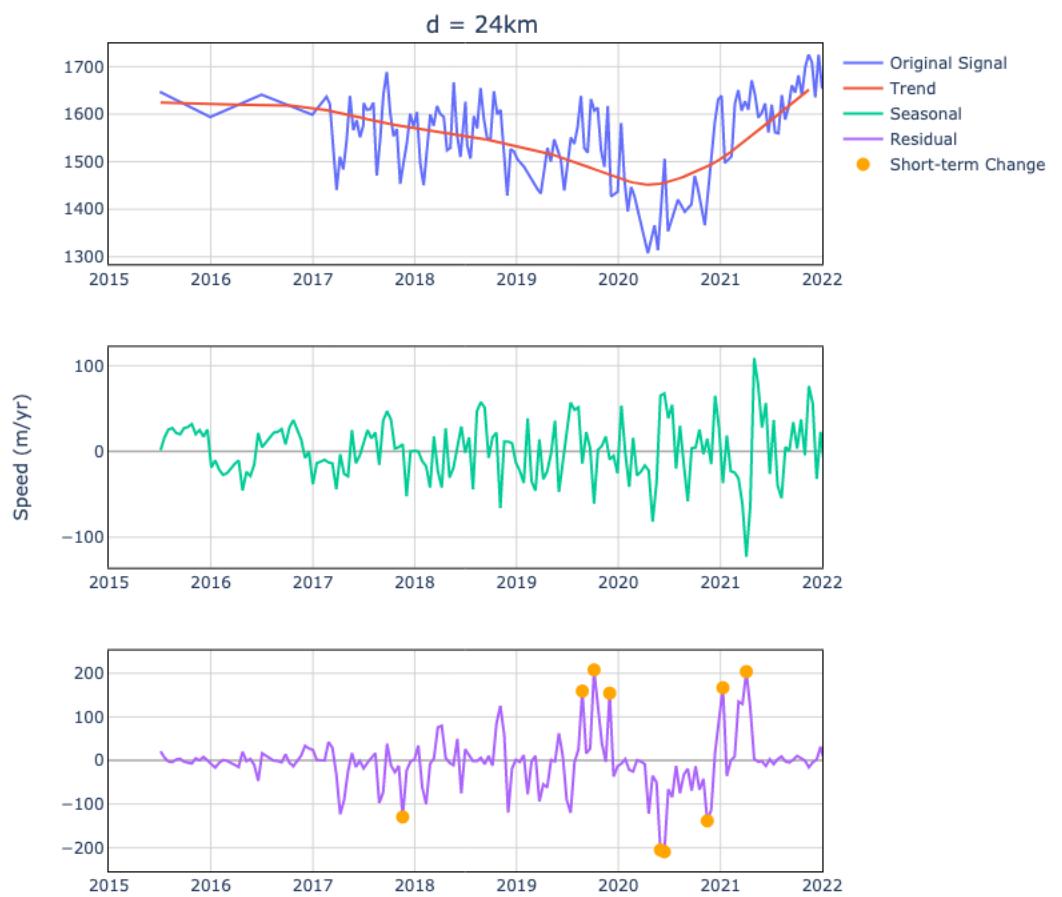

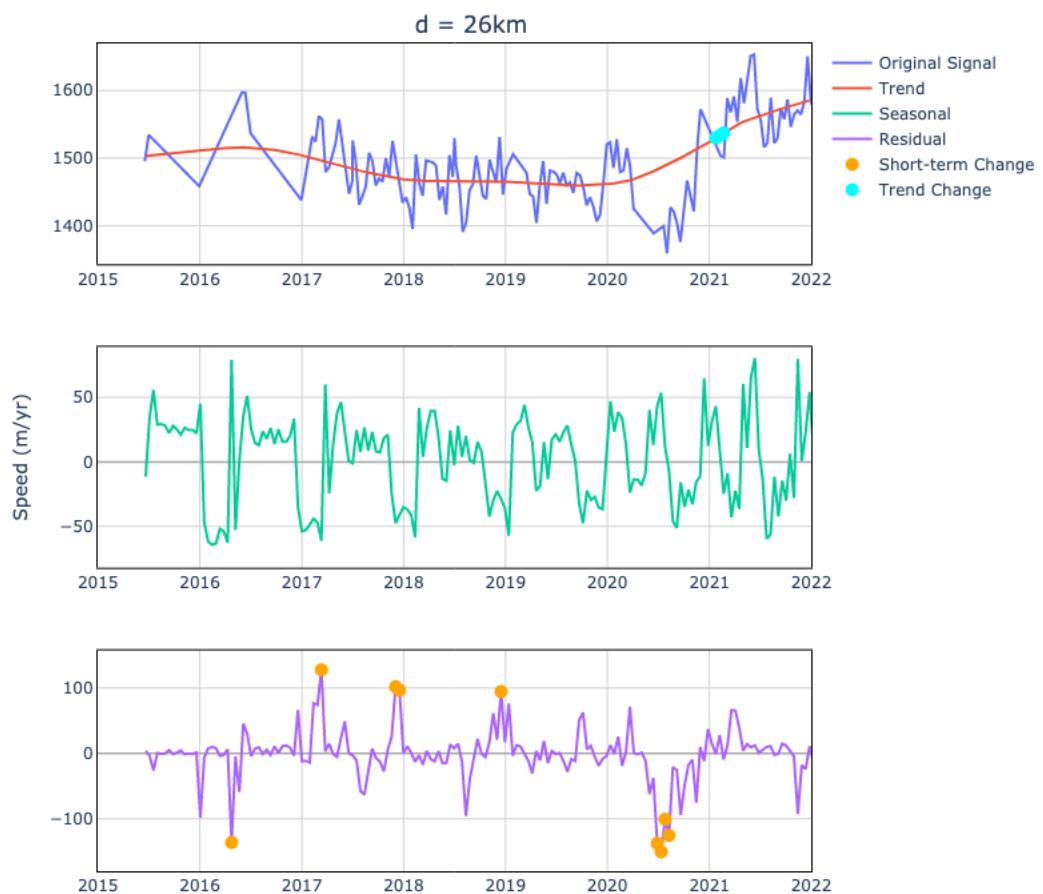

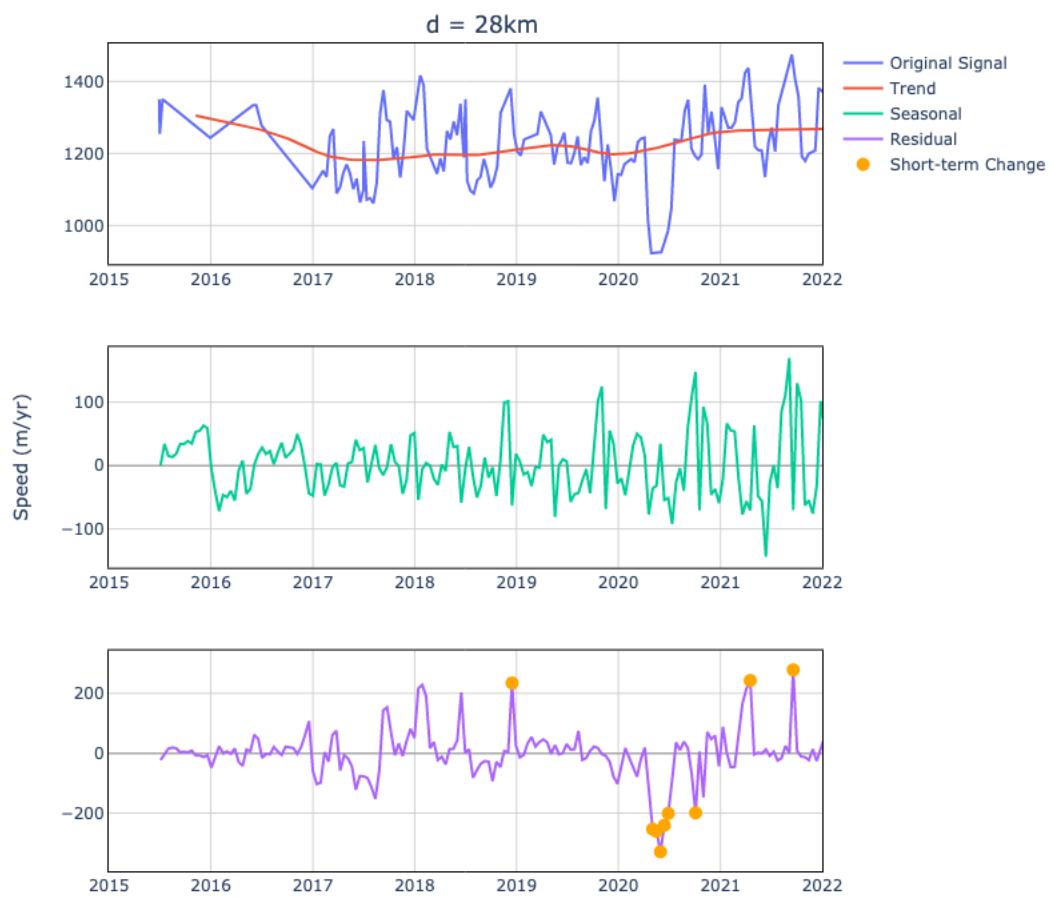

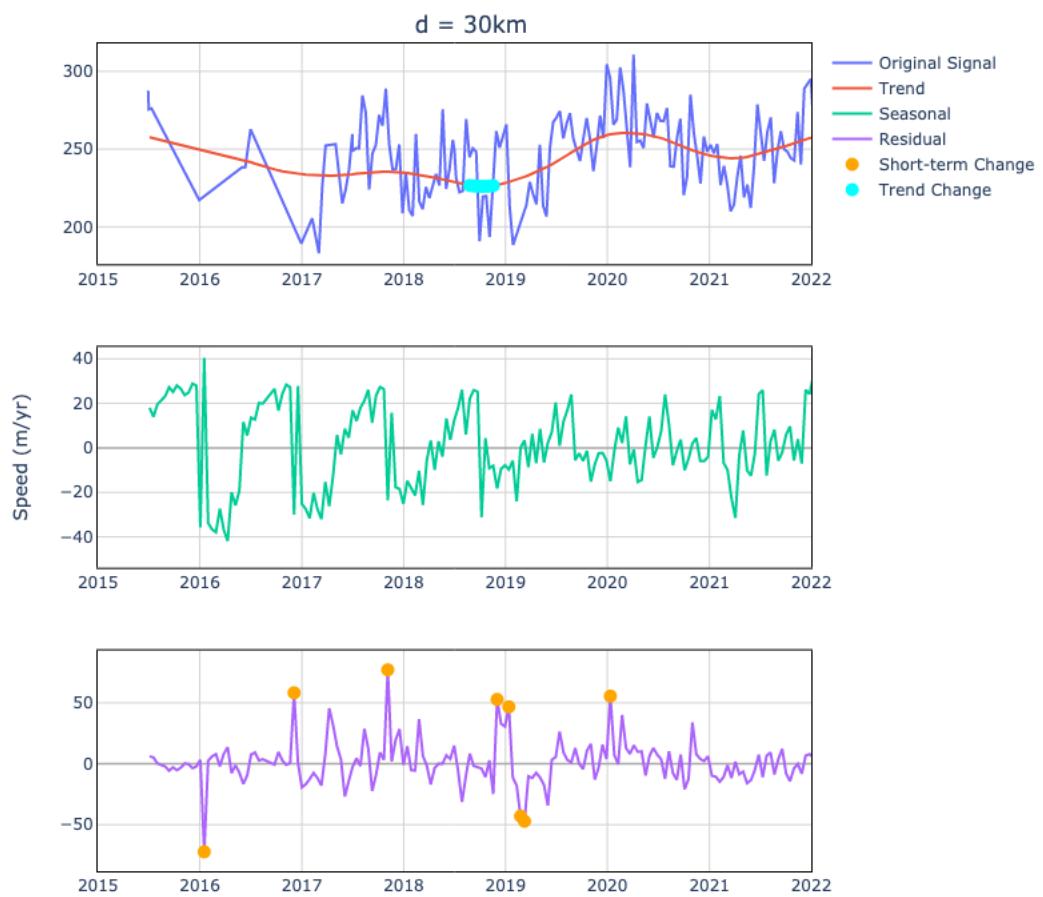

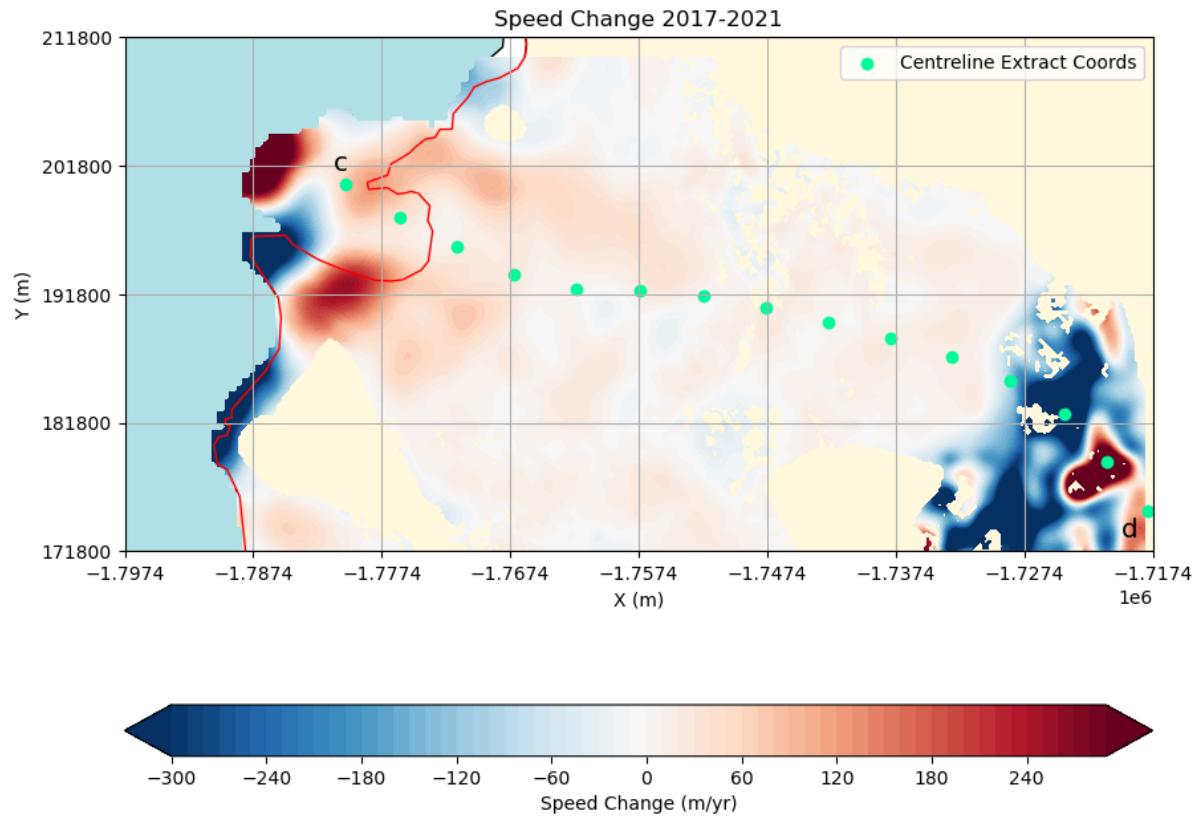

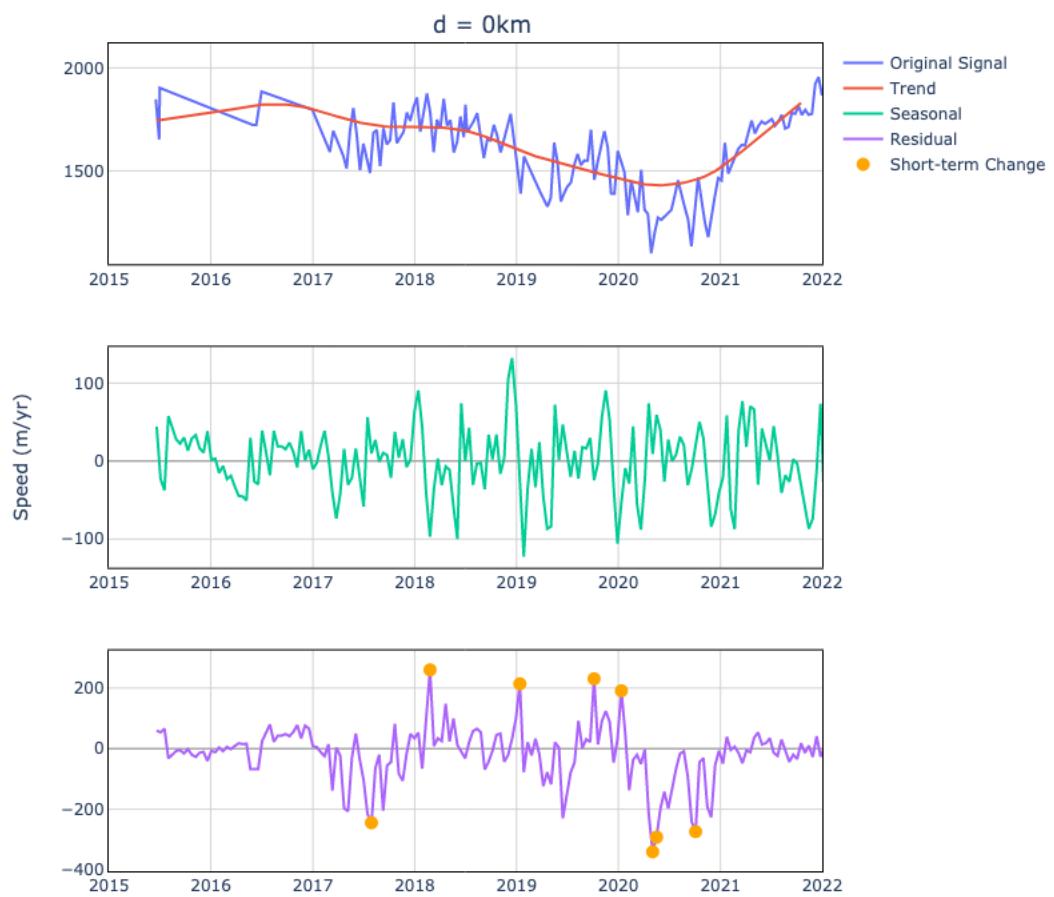

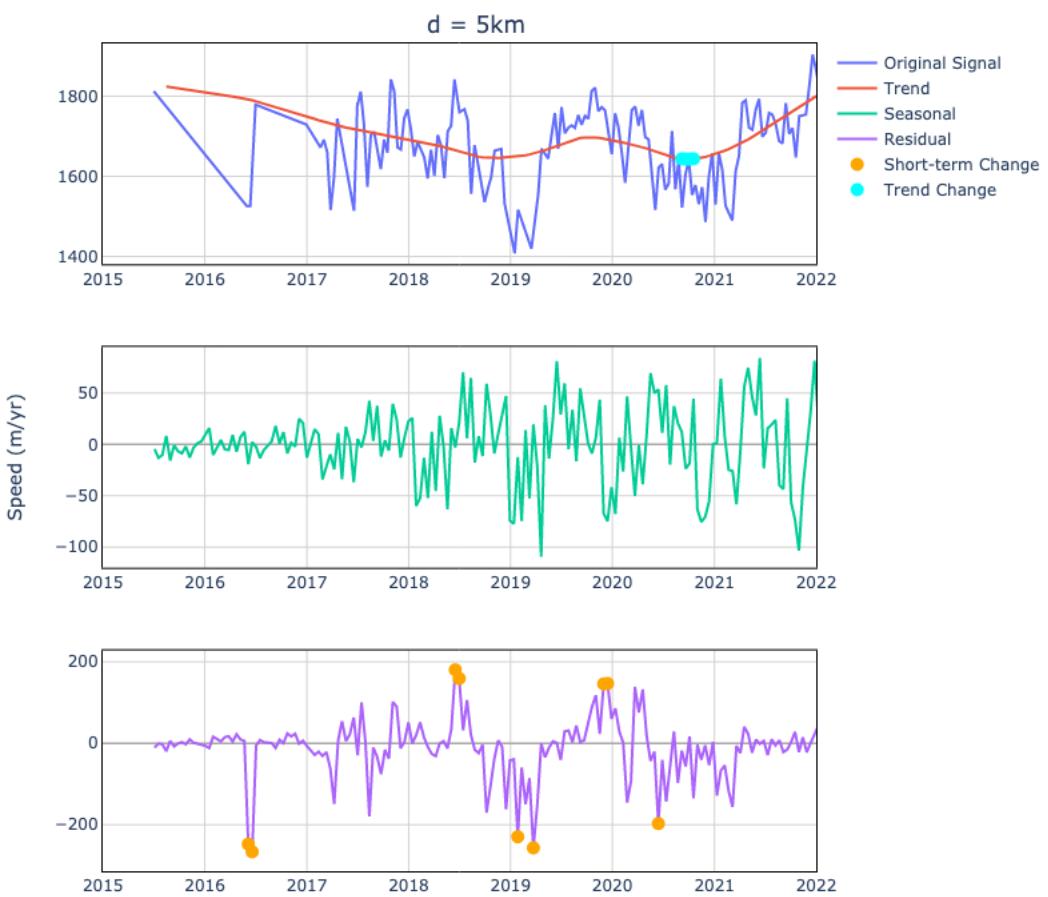

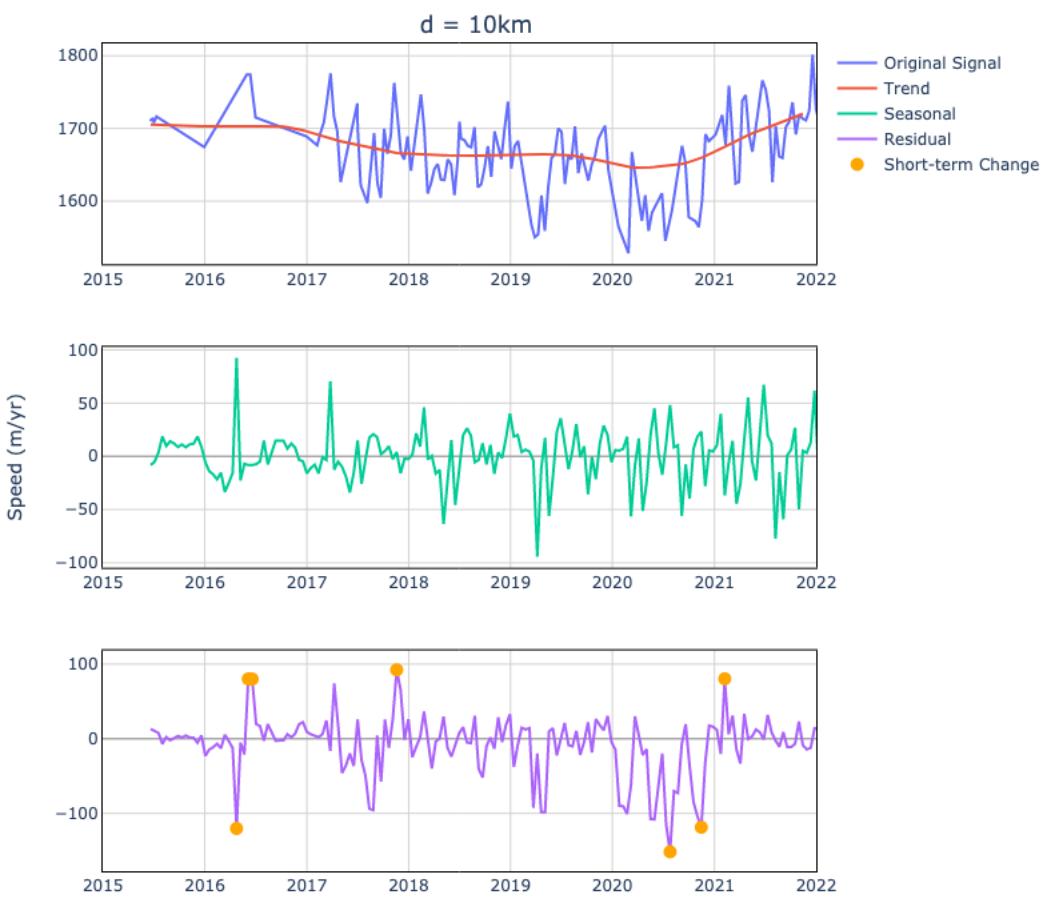

Ferrigno Ice Stream (FIS) profile along the centreline of the glacier:

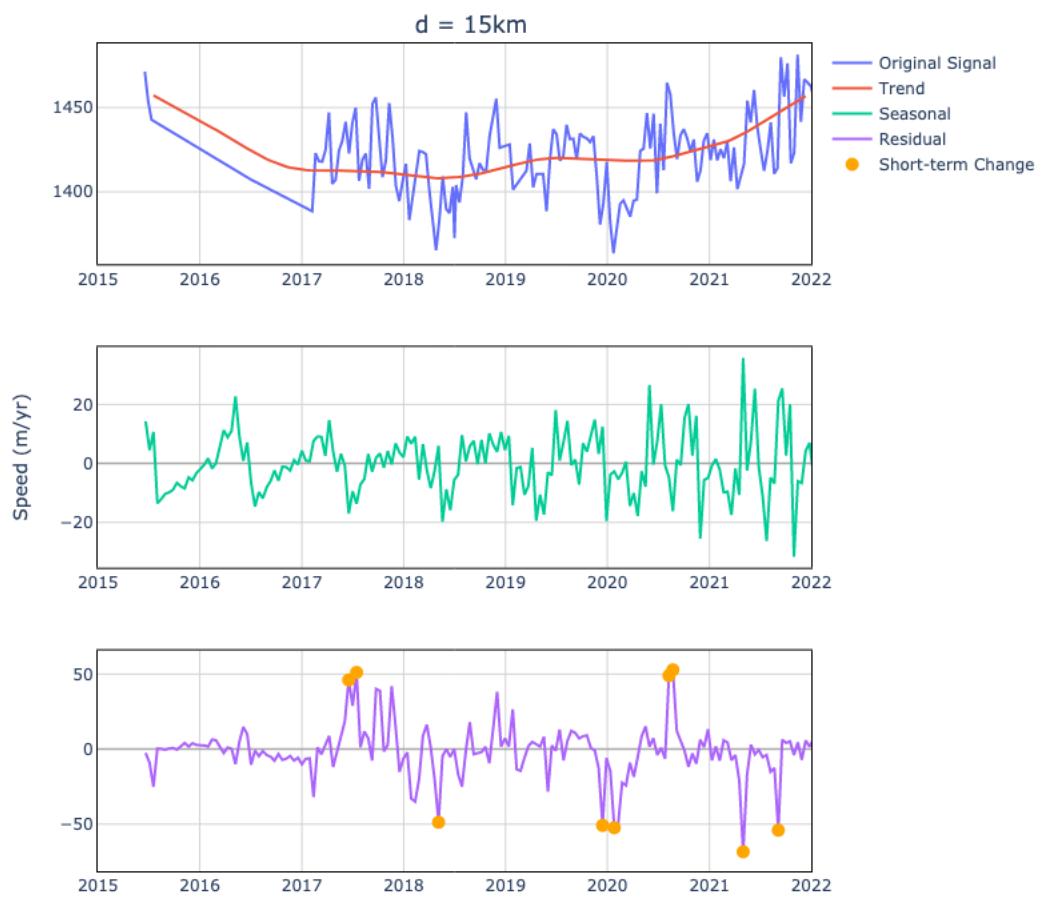

Point c is the start point ($d = 0\text{km}$) and d is the end point ($d = 80\text{km}$). Extraction points are spaced 5km apart.

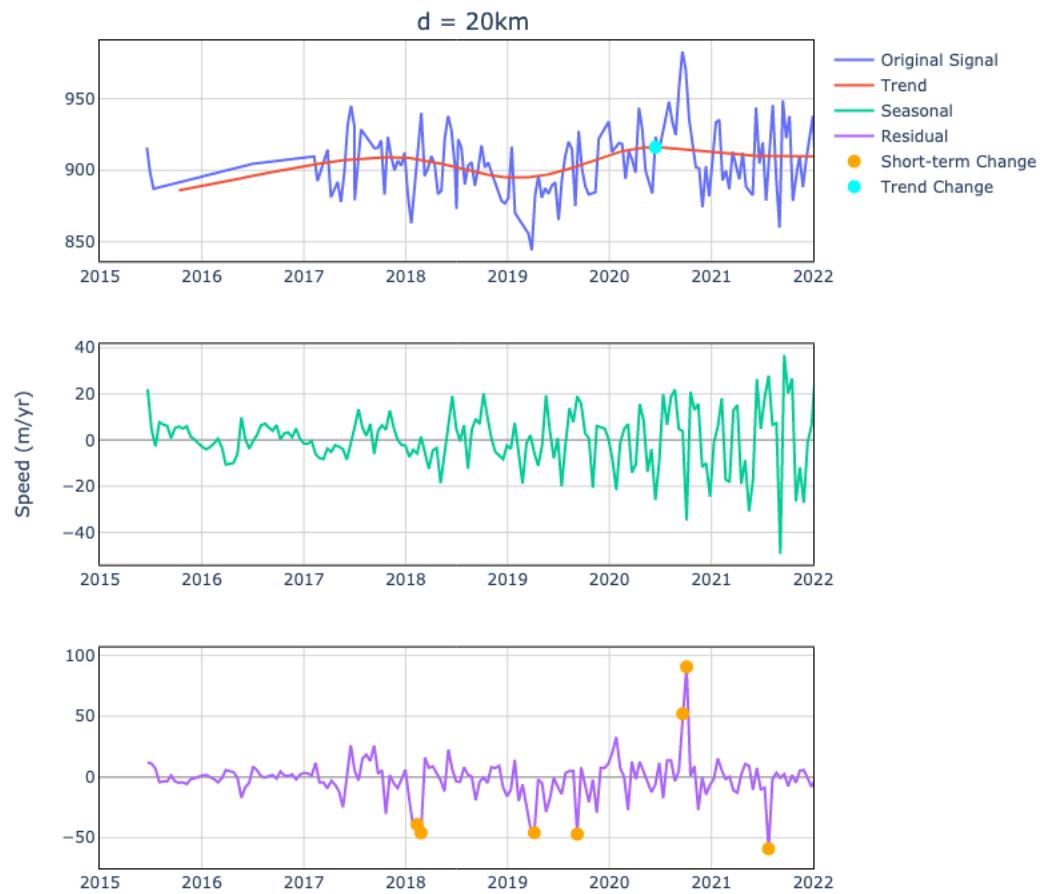

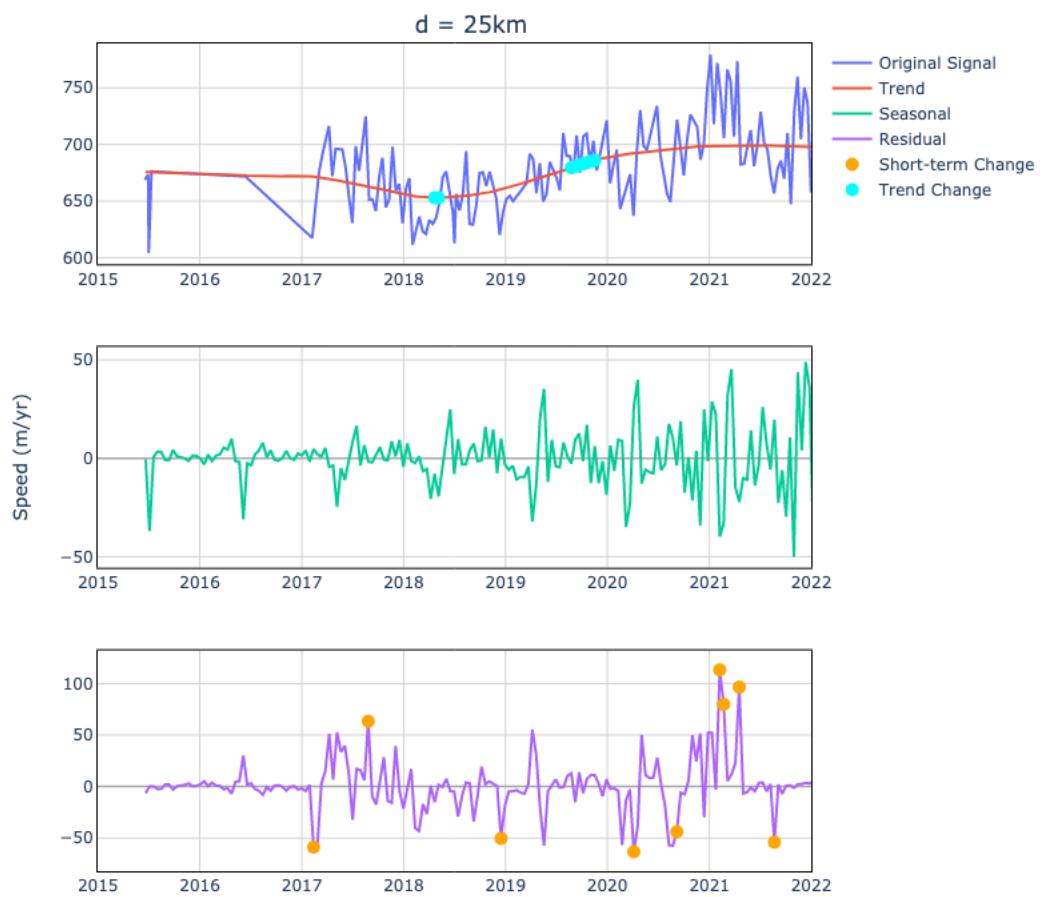

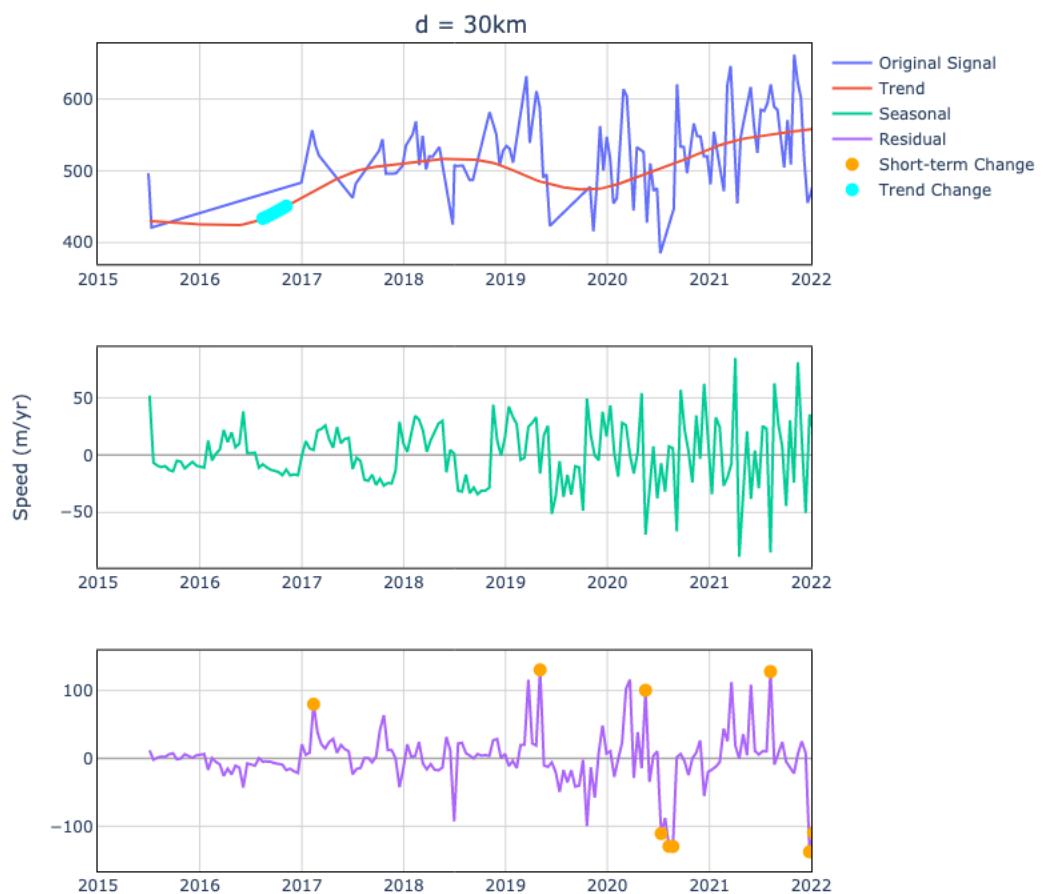

$d = 35\text{km}$
